Redox Signaling and Biomarkers in Ageing Ufuk Çakatay,2021-12-02 This book aims to present the age related alterations in redox signaling networks and their diagnostic biomarkers in aging cells using multidisciplinary approach Establishing sensitive and specific biomarkers of dynamic redox homeostasis is crucially important in the development of effective antiaging and senolytic interventions Recent years have seen tremendous advances in the understanding of redox signaling events which highlight the process of aging and age related pathologies A

major challenge in biological aging research is developing reliable biomarkers to determine the consequences of disrupted redox signaling networks long before the clinical diagnosis of age related diseases is made Therefore we have chosen to concentrate on aging induced aberrant redox signaling networks their biomarkers and pathological consequences in this book Although oxidation is a natural metabolic process the imbalance in the level of oxidants and antioxidants causes oxidative stress and eventually leads to inflammatory conditions diabetes neurodegenerative diseases and cancer Novel redox sensitive biomarkers for the evaluation of aging induced proteinopathies such as amyloid and tau proteins in Alzheimer s disease synuclein in Parkinson s disease and islet amyloid polypeptides in type 2 diabetes mellitus recently drew the attention of researchers Inside this textbook readers will find comprehensive perspectives on the association between redox homeostasis and the aging process both at the molecular and clinical levels Due to the inherent relationship between impaired metabolic activities and oxidative stress the temporal interaction between intermediary metabolism and disturbed redox status can lead to greater susceptibility to aging induced diseases and disorders such as cardiovascular diseases hypertension and diabetes This knowledge could be a key to continued research toward improving medication regimens such as in cancer and cardiovascular therapies and procedural outcomes for patients This book brings together current research evidence and knowledge on redox signaling and biomarkers in aging in chapters written by leading global experts in this rapidly evolving field We hope that this textbook is of interest to a wide group of researchers advanced students scientifically curious non specialist readers and clinicians alike

Nutritional Toxicity: Physiology, Nutrition, and Human Health Tingting Ju, Siddika Yalcin, Misha Vrolijk,2025-08-20 Food is a basic

human need Our diet provides the human body with nutrients and other elements that are necessary for maintaining a good health Sufficient intake of nutrients is therefore considered vital However in the past years the environmental impact on our food and an increased adherence to the Westernized diet which consists of ultra processed foods have negatively impacted the quality of our food and thus also our nutrition In addition to these influences today s food is produced differently and food patterns change and shift towards more sustainable diets A major change from animal meat to more plant based foods is occurring whilst new protein sources are introduced such as insects seaweed and artificial protein sources Food additives such as artificial sweeteners are also becoming increasingly popular These environmental and sustainable developments have led to the introduction of new foods different proportions of nutrients in our foods and new elements to our food that altogether are potentially harmful for our health Growing interest in the use of nutrient supplements also introduces potential risks with consuming levels of nutrients above those deemed tolerable or safe Therefore having a better understanding of nutritional toxicity in the context of the modern food industry becomes fundamental
