

# Energy Emissions

## Renewable energy sources

Renewable energy comes from energy sources that are continually replenished through the cycles of nature. Unlike fossil fuels (gas, coal, oil) their supply will never be exhaustive.

### Wind Energy

Source/origin:

- Energy that travels in the wind can be captured and converted to electricity.
- This is done using large wind turbines (on land or offshore)
- The energy in the wind turns two or three propellor like blades around a rotor.
- The rotor is connected to the main shaft, which spins a generator to create electricity.

Advantage:

- Clean, does not pollute the air or produce greenhouse gases.
- Renewable and wind is free!

Disadvantage:

- Some wind turbines are very noisy especially if there are a good few together (wind farm)
- Electricity is only produced when wind blows.

**Leaving Certificate Economics Notes** James O'Donnell, 2017-05-09 These notes treat of the Leaving Certificate Higher Level Economics course The coverage is as short and concise as possible to aid the student's learning It was necessary to omit certain topics such as population economics and development however all omissions concern material which is not central to the course or an understanding of economics As such these notes form the minimum course of economics required to get an A1 in the Irish Leaving Certificate or at least to do very well It is important to note that these notes should be utilised in conjunction with past papers and past marking schemes in order to maximise examination performance
