

# Genetic Engineering

Genetic engineering involves the manipulation of organism genes.

The central tool is the recombinant DNA technique.

- to isolate a gene of interest from one organism
- to insert the isolated gene to a DNA molecule (known as vector) that can replicate.
- to provide an environment (known as recipient cells) that allows reproduction of the joined DNA molecule and generate the gene product.

Inevitably open discussion and consideration of the theory of evolution can chip away at the mental framework constructed by Creationists eroding the foundations of their faith The conceptual battleground is so fraught with logical challenges to Creationist dogma that in a number of cases students exposure to such dangerous ideas is actively prevented This book provides a detailed map of this astonishing struggle in today s America a struggle many had thought was done and dusted with the onset of the Enlightenment
