

Manual focus

The majority of autofocus lenses have a slider that allows you to switch from autofocus to manual focus. If you turn the focusing ring without selecting manual focus first, you may risk damaging the lens... but this isn't always the case, though, as you'll see on the following page.

Eyelevel viewfinder

Split-image focusing screens on film cameras made manual focusing with a viewfinder quite simple. Trying to do it by eye using today's focusing screens is much harder. You'll need to adjust the eyepiece diopter – like the one shown here – to make sure subjects that are sharp don't look blurred or vice versa.

Focus indicator

Even when you focus manually, it pays to select an AF point that corresponds with the subject so that you can take advantage of the focus indicator – the small dot in the viewfinder that lets you know that focus has been achieved. Keep the shutter button half-pressed as you turn the focusing ring to enable this. The AF point may also glow red or green when you have set the manual focus correctly.

Remote devices

Tethering your camera to a computer or external monitor, either via a cable or wirelessly, allows you to view the Live View image in compatible software. Doing so gives you both a larger screen to screen to work with and may also unlock more detailed manual focusing options. For instance, Manfrotto's Digital Director turns an iPad into a control and preview screen for selected Canon and Nikon cameras.

Manual focusing aids

Many camera makers provide options to make manual focusing easier when you're using Live View or an electronic viewfinder. One of the most common is 'focus peaking,' a tool that's been available on high-end video cameras for years, but is relatively new to digital cameras. Some cameras can also be set to mimic the split-image focusing screen of old film cameras. You can discover how these work over the page.

Magnified Live View

An illuminated Live View screen makes manual focus possible in low light, when you can hardly see anything through an optical viewfinder. It's the ability to magnify the Live View image that's the real game-changer, however; you can ensure the focus is positioned correctly on the smallest details. Unsurprisingly, it's really useful for macro photography, where it can be impossible to judge the focus through an optical viewfinder.
