Nagarajan,M. Lathamaheswari,Said Broumi,J. Kavikumar,Florentin Smarandache, As the world is a competitive one prediction of the future trend is an important task for the survival of any organization There are many statistical and technical methods available for doing this task and this can be done in an optimized way using Markov chain with time series where random changes are allowed Markov chains are an essential technique in random process underlying the Markov property 1 Longrun behavior is the behavior of the system where each and every input can be different and the free entry is unconditional In addition the cost of this behavior is the minimum of short run behavior **Predictive Econometrics and Big Data** Vladik Kreinovich,Songsak Sriboonchitta,Nopasit Chakpitak,2017-11-30 This book presents recent research on predictive econometrics and big data Gathering edited papers presented at the 11th International Conference of the Thailand Econometric Society TES2018 held in Chiang Mai Thailand on January 10 12 2018 its main focus is on predictive techniques which directly aim at predicting economic phenomena and big data techniques which enable us to handle the enormous amounts of data generated by modern computers in a reasonable time The book also discusses the applications of more traditional statistical techniques to econometric problems Econometrics is a branch of economics that employs mathematical especially statistical methods to analyze economic systems to forecast economic and financial dynamics and to develop strategies for achieving desirable economic performance It is therefore important to develop data processing techniques that explicitly focus on prediction The more data we have the better our predictions will be As such these techniques are essential to our ability to process huge amounts of available data **Geometric Methods in Physics** Piotr Kielanowski,S. Twareque Ali,Alexander Odesskii,Anatol Odziejewicz,Martin Schlichenmaier,Theodore Voronov,2013-07-30 The Bia owie a workshops on Geometric Methods in Physics taking place in the unique environment of the Bia owie a natural forest in Poland are among the important meetings in the field Every year some 80 to 100 participants both from mathematics and physics join to discuss new developments and to interchange ideas The current volume was produced on the occasion of the XXXI meeting in 2012 For the first time the

workshop was followed by a School on Geometry and Physics which consisted of advanced lectures for graduate students and young researchers. Selected speakers of the workshop were asked to contribute and additional review articles were added. The selection shows that despite its now long tradition the workshop remains always at the cutting edge of ongoing research. The XXXI workshop had as a special topic the works of the late Boris Vasilievich Fedosov 1938-2011 who is best known for a simple and very natural construction of a deformation quantization for any symplectic manifold and for his contributions to index theory.
