

5. A survey of 100 households gave the following results for weekly income £y.

Income y (£)	Mid-point	Frequency f
$0 \leq y < 200$	100	12
$200 \leq y < 240$	220	28
$240 \leq y < 320$	280	22
$320 \leq y < 400$	360	18
$400 \leq y < 600$	500	12
$600 \leq y < 800$	700	8

(You may use $\sum fy^2 = 12\,452\,800$)

A histogram was drawn and the class $200 \leq y < 240$ was represented by a rectangle of width 2 cm and height 7 cm.

(a) Calculate the width and the height of the rectangle representing the class $320 \leq y < 400$ (3)

(b) Use linear interpolation to estimate the median weekly income to the nearest pound. (2)

(c) Estimate the mean and the standard deviation of the weekly income for these data. (4)

One measure of skewness is $\frac{3(\text{mean} - \text{median})}{\text{standard deviation}}$.

(d) Use this measure to calculate the skewness for these data and describe its value. (2)

Katie suggests using the random variable X which has a normal distribution with mean 320 and standard deviation 150 to model the weekly income for these data.

(e) Find $P(240 < X < 400)$. (2)

(f) With reference to your calculations in parts (d) and (e) and the data in the table, comment on Katie's suggestion. (2)

Branching Random Walks Zhan Shi, 2016-02-04 Providing an elementary introduction to branching random walks the main focus of these lecture notes is on the asymptotic properties of one dimensional discrete time supercritical branching random walks and in particular on extreme positions in each generation as well as the evolution of these positions over time Starting with the simple case of Galton Watson trees the text primarily concentrates on exploiting in various contexts the spinal structure of branching random walks The notes end with some applications to biased random walks on trees

Unilateral Variational Analysis In Banach Spaces (In 2 Parts) Lionel Thibault, 2023-02-14 The monograph provides a detailed and comprehensive presentation of the rich and beautiful theory of unilateral variational analysis in infinite dimensions It is divided into two volumes named Part I and Part II Starting with the convergence of sets and the semilimits and semicontinuity of multimappings the first volume develops the theories of tangent cones of subdifferentials of convexity and duality in locally convex spaces of extended mean value inequalities in absence of differentiability of metric regularity of constrained optimization problems The second volume is devoted to special classes of non smooth functions and sets It expands the theory of subsmooth functions and sets of semiconvex functions and multimappings of primal lower regular functions of singularities of non smooth mappings of prox regular functions and sets in general spaces of differentiability of projection mapping and others for prox regular sets Both volumes I and II contain for each chapter extensive comments covering related developments and historical comments Connected area fields of the material are optimization optimal control variational inequalities differential inclusions mechanics economics The book is intended for PhD students researchers and practitioners using unilateral variational analysis tools

Capture-Recapture Methods for the Social and Medical Sciences Dankmar Böhning, Peter G.M. van der Heijden, John Bunge, 2017-07-28 Capture recapture methods have

been used in biology and ecology for more than 100 years. However, it is only recently that these methods have become popular in the social and medical sciences to estimate the size of elusive populations such as illegal immigrants, illicit drug users, or people with a drinking problem. *Capture Recapture Methods for the Social and Medical Sciences* brings together important developments which allow the application of these methods. It has contributions from more than 40 researchers and is divided into eight parts including topics such as ratio regression models, capture recapture meta-analysis, extensions of single and multiple source models, latent variable models, and Bayesian approaches. The book is suitable for everyone who is interested in applying capture recapture methods in the social and medical sciences. Furthermore, it is also of interest to those working with capture recapture methods in biology and ecology, as there are some important developments covered in the book that also apply to these classical application areas.

Dispelling Misconceptions About English Language Learners Barbara Gottschalk, 2019-10-23. Nearly three quarters of public schools in the United States enroll English language learners (ELLs). That means teachers at all grade levels need to know how to help these students achieve full academic English language proficiency. In *Dispelling Misconceptions About English Language Learners*, Barbara Gottschalk dispels 10 common misconceptions about ELLs and gives teachers the information they need to help their ELLs succeed in the classroom. From her perspective as a teacher of English as a second language, Gottschalk answers several key questions: Just who is an English language learner? Why is it important to support home language maintenance and promote family engagement? What are the foundational principles for instruction that help educators teach ELLs across the content areas? How can teachers recognize and incorporate the background knowledge and experiences ELLs bring to class? Why is it important to maintain high standards and expectations for all students, including ELLs? How can a teacher tell when an ELL needs special education versus special teaching? By answering these questions and more, Gottschalk gives teachers a crystal clear understanding of how to reach ELLs at each stage of English language acquisition. Her expert guidance reinforces for teachers what they are already doing right and helps them understand what they might need to be doing differently.
