"An Insect View of Its Plain" Rosemary Scanlon McTier, 2013-02-01 During the

nineteenth century insects became a very fashionable subject of study and the writing of the day reflected this popularity. However, despite an increased contemporary interest in ecocriticism and cultural entomology, scholars have largely ignored the presence of insects in nineteenth century literature. This volume addresses that critical gap by exploring the cultural and literary position of insects in the work of Henry David Thoreau, Emily Dickinson, and John Muir. It examines the beliefs these authors share about the nature of our connection to insects and what insects have to teach about creation and our place in it. An important contribution to both ecocriticism and literary entomology, this work contributes much to the understanding of Thoreau, Dickinson, and Muir as nature writers, natural scientists, entomologists, and botanists, and their intimate and highly spiritual relationships with nature.

The Renin-Angiotensin System and the Kidney Xiao C. Li, Jia L. Zhuo, 2015-03-01 The renin-angiotensin system (RAS) is one of the most important endocrine tissue-to-tissue, paracrine cell-to-cell, and intracrine intracellular nuclear-humoral systems in the regulation of blood pressure, cardiovascular, and kidney function in health and disease. The RAS has remarkably evolved from the initial discovery of the rate-limiting enzyme renin to a complex biochemical and physiological cascade involving more than a dozen members. Currently, there are up to five axes or pathways identified in the RAS: each has its substrate, enzyme, effector peptide, receptor, and downstream signaling pathways. These include the renin-ACE-ANG II-AT1 receptor, the APA-ANG III-AT2 receptor, the ACE2-ANG 1-7-Mas receptor, the prorenin-prorenin receptor (PRR), and the ANG IV-AT4 receptor-IRAP pathways. Accordingly, the roles of the RAS have expanded well beyond the classic endocrine paradigm as a powerful vasoconstrictor, a potent aldosterone stimulator, or a sodium-retaining hormonal system. The goals of this article are to review and discuss the current insights into and new perspectives on the expression, localization, and novel actions of the RAS, with a focus in the kidney. Special emphasis will be placed on recently discovered new members of the RAS derived from studies using innovative mutant rats or mice that either overexpress knockin or are deficient knockout of a particular substrate, enzyme, ANG peptide, or receptor. This new knowledge will help improve our understanding how each of these pathways acts directly or indirectly to regulate blood pressure, cardiovascular, and kidney function in physiology and can be targeted to treat hypertension, cardiovascular, and renal diseases.

Separating Information Maximum Likelihood Method for High-Frequency Financial Data Naoto Kunitomo, Seisho Sato, Daisuke Kurisu, 2018-06-14 This book presents a systematic explanation of the SIML (Separating Information Maximum Likelihood) method, a new approach to financial econometrics. Considerable interest has been given to the estimation problem of integrated volatility and covariance by using high-frequency financial data. Although several new statistical estimation procedures have been proposed, each method has some desirable properties along with some shortcomings that call for improvement. For estimating integrated volatility, covariance,

and the related statistics by using high frequency financial data the SIML method has been developed by Kunitomo and Sato to deal with possible micro market noises The authors show that the SIML estimator has reasonable finite sample properties as well as asymptotic properties in the standard cases It is also shown that the SIML estimator has robust properties in the sense that it is consistent and asymptotically normal in the stable convergence sense when there are micro market noises micro market non linear adjustments and round off errors with the underlying continuous time stochastic process Simulation results are reported in a systematic way as are some applications of the SIML method to the Nikkei 225 index derived from the major stock index in Japan and the Japanese financial sector
