

COMBINER 100 12 Volt Model C100 FOR ALTERNATORS UP TO 100 AMPS.

SUMMARY

The Combiner 100 is a precision voltage-sensing relay (13.0-volts) which connects two batteries together when either is receiving a charge. When the charging ceases, it disconnects so that each battery operates independently and prevents accidental discharge of the starting battery. Supplemental battery banks can be added by using an additional combiner for each bank. It eliminates manual switching every time you start the engine to parallel batteries for charging. Never again forget to switch it back. No diodes so no voltage drop, and batteries get a full charge.

FEATURES

Suitable for alternators up to 100 amps, up to 1.8 volts.
60-amp continuous rating, 400-amp closing current.
One year, factory-direct, limited warranty.
Waterproof.
Ignition rated for explosive atmospheres.
No voltage drop, so batteries reach full charge.
Electronic thermal monitoring with shutdown & restart.
Minimal wasted power, no heat sink or cooling required.
Can be used on alternators with internal regulators.
Protects alternator against overload from low batteries.
No special wiring for alternators with external sense.
Simple basic installation, two battery wires and ground.
Comes with all cables for basic hookup 1.

Green LED Indicates when combined.

Red LED Indicates Overload or Low Voltage.

Draws no current when batteries are not being charged.
Draws less than 150-millamps from the alternator when charging is in progress.

No diodes to burn out if accidentally shorted. Optional external remote for off, automatic, on.
Remote "ON" can be used for assisted engine starting.

Withstands ambient temperature to over 175 F (80 C) for exposed or engine compartment mounting.

SAFETY CONSIDERATIONS

DANGER: On all alternator/regulator circuits with an external sense wire it is critical that the sense wire can never be disconnected from the alternator output.
Damaging, self-destruct voltages may be produced.
Installation of a Zap-Stop will not protect against damage if this happens.

WARNING: If there are switches which can disconnect the alternator output from the battery a Zap or similar protection diode can reduce the chance of Stop.

alternator damage and it is recommended for all installations. Switching off the output from the alternator should be avoided when the engine is running.

Since the connections made in the battery circuits can carry hundreds of amps, it is imperative that you have low

resistance connections. This means having clean metal to metal contact, the right size ring terminals, properly crimped terminals (preferably soldered also), and secure mechanical fastenings.

BASIC INSTALLATION

1. Connect the **BLACK** ground wire to the common negative of your battery banks. Shorten if necessary.

2. The **RED** cables connect to the positive terminals of the batteries. **SHORTENING THESE POWER CABLES WILL VOID THE WARRANTY.** Extending is OK.

The connection does not have to be made right on the battery terminals but any wire or cables between the battery and the combiner must be heavy enough to carry the combiner current in addition to any existing loads. Make sure the second red lead is not touching ground when you connect the first since the combiner sometimes closes momentarily when initially connected.

3. Any other wires are not normally used and should be secured and the ends insulated. See Appendix.

With Single the engine Combiner 100 powerboats: you can use an (optional) OFF-1-switch to select the engine power source and leave **BOTH-2** the DC loads permanently on battery 2. Starting power is normally supplied from the starting battery in position 1, but battery 2, or both can be selected in an emergency. In all cases, both batteries are being charged when the engine is running.

WARNING: If you use this circuit, turning the switch to "OFF" while the engine is running may damage your alternator. If not using a switch, the motor connects directly to the starting battery.
