Impossibility : The Limits of Science and the Science of Limits John D. Barrow,1998-03-12 Are there some things we can never think or know let alone do In this fascinating book acclaimed author John Barrow reveals the often paradoxical limits on knowledge and achievement and shows that the notion of impossibility has played and continues to play a striking role in our thinking and in the way in which we understand the universe and ourselves What are the true limits of science and human endeavour The end of each century leads to a stocktaking of human achievement and our expectation about the future This new book by John D Barrow looks at what limits there might be to human discovery and what we might find ultimately to be unknowable undoable or unthinkable Weaving together a tapestry of surprises Barrow explores the frontiers of knowledge taking in surrealism impossible figures time travel paradoxes of logic and perspective theological speculations about Beings for whom nothing is impossible all stimulate us to contemplate something more than what is With sufficient time and money at our disposal why should we find anything impossible Barrow explores the limits that may be imposed upon a full understanding of the physical Universe by constraints of technology

computes cost and complexity He considers how the nature of the universe's structure prevents us from answering the deepest questions about its beginning its structure and its future And he delves into the deep limits imposed by the nature of knowledge itself which have profound implications for any quest for complete knowledge They take us into the debates over the problems of free will and consciousness Gödel's famous theorem about our inability to capture the truths of mathematics by rules and axioms is explored to see if it has any implications for science Clearly and engagingly written and using simple explanations this book reveals that impossibility is a deep and powerful notion that any Universe complex enough to contain conscious beings will contain limits on what those beings can know about their Universe that what we cannot know defines reality as surely as what we can know Impossibility is a two edged sword it threatens the completeness of the scientific enterprise yet without it there would be no laws of Nature no science and no scientists In this illuminating well written account of Limits with capital L John D Barrow chronicles and explains the limits of science as a reality generation mechanism and why it matters So for about as good an account as you're going to get of where science stops read this book It won't tell you any final answer But the journey is far more interesting and important than the destination Nature
