Life Cycle Approaches to Sustainable Regional Development Stefania Massari, Guido Sonnemann, Fritz Balkau, 2016-12-08

Life Cycle Approaches to Sustainable Regional Development explains the ways life cycle methodologies and tools can be used to strengthen regional socio economic planning and development in a more sustainable manner. The book advocates the adoption of systematic and long term criteria for development decision making taking into account the full life cycle of materials and projects. It describes life cycle practices from both a scientific and a practitioner point of view highlighting examples and case studies at regional level. The applications are relevant to key economic sectors as well as for internal planning and administrative procedures. It concludes with a synthesis chapter that distills the key messages from the authors into practical guidance points on how best to use such approaches to enhance sustainability in regional development. The book is essential reading for regional and urban planners who are integrating life cycle thinking into their policy regimes as well as for researchers working to further evolve life cycle methodologies.

**System Innovation for Sustainability 1** Arnold

Tukker, Martin Charter, Carlo Vezzoli, Eivind Stø, Maj Munch Andersen, 2017-09-08. Sustainable consumption and production (SCP) was adopted as a priority area during the World Summit on Sustainable Development in Johannesburg in 2002 and has since become one of the main vehicles for targeting international sustainability policy. Sustainable consumption focuses on formulating equitable strategies that foster the highest quality of life, the efficient use of natural resources and the effective satisfaction of human needs while simultaneously promoting equitable social development, economic competitiveness and technological innovation. But this is a complex topic and as the challenges of sustainability grow larger there is a need to re-imagine how SCP policies can be formulated, governed and implemented. The EU funded project Sustainable Consumption Research Exchanges (SCORE) consists of around 200 experts in the field of sustainable innovation and sustainable consumption. The SCORE philosophy is that innovation in SCP policy can be achieved only if experts that understand business, development, sustainable solution design, consumer behaviour and system innovation policy work together in shaping it. Sustainable technology design can be effective only if business can profitably make the products and consumers are attracted to them. To understand how this might effectively happen the expertise of systems thinkers must be added to the mix. System Innovation for Sustainability 1 is the first result of a unique positive confrontation between experts from all four communities. It examines what SCP is and what it could be, provides a state of the art review on the governance of change in SCP policy and looks at the strengths and weaknesses of current approaches. The SCORE experts are working with actors in industry, consumer groups and eco labelling organisations in the key consumption areas of mobility, food and agriculture and energy use and housing responsible for 70% of the life cycle environmental impacts of Western societies with the aim of stimulating, fostering or forcing change to SCP theory in practice. The System Innovation for Sustainability series will

continue with three further volumes of comprehensive case studies in each of these three critical consumption areas Each chapter of this book examines problems and suggests solutions from a business design consumer and system innovation perspective It primarily examines the differing solutions necessary in the consumer economies of the West but also comments on the differing needs in rapidly emerging economies such as China as well as base of the pyramid economies The System Innovation for Sustainability series is the fruit of the only major international research network on SCP and will set the standard in this field for some years to come It will be required reading for all involved in the policy debate on sustainable production and consumption from government business academia and NGOs for designers scientists businesses and system innovators
