

3.6b The TDC timing mark (A) on the camshaft sprocket should align with the reference mark (B) on the top of the lower engine mounting bracket/upper timing belt cover ...

3.6c ... or the reference mark (C) at the top of the valve cover

7 If the crankshaft pulley is now removed (see Section 5), the timing mark on the crankshaft sprocket should be aligned with the TDC mark at the bottom of the oil pump flange (see illustration). If necessary, the flywheel may be locked to the cylinder block by inserting a suitable bolt through the special hole in the left-hand front of the block and locating it in the hole in the flywheel. Renault technicians use a special tool for this, and it is worth displaying a warning on the steering wheel as a precaution against someone attempting to start the engine with the tool in position.

4 Valve clearances - adjustment

Note: This operation is not part of the maintenance schedule. It should be undertaken if noise from the valve gear becomes evident, or if loss of performance gives cause to suspect that the clearances may be incorrect. A new valve cover gasket will be required.

1 Remove the inlet manifold, as described in Chapter 4A.

2 Unscrew the bolts, and remove the valve cover and gasket. Discard the gasket, a new one must be used on refitting.

3.7 The timing mark (A) on the crankshaft sprocket should be aligned with the timing mark (B) on the oil pump flange

3 Remove the spark plugs, with reference to Chapter 1A, in order to make turning the engine easier. This however is not essential.

4 Draw the valve positions on a piece of paper, numbering them according to their cylinders, from the flywheel end of the engine (ie, 1E, 1I, 2E, 2I and so on). The inlet valves are on the inlet manifold side of the cylinder head, and the exhaust valves are on the exhaust manifold side. As the valve clearances are adjusted, cross them off.

5 There are two methods of adjusting the valve clearances; the 'camshaft mark' method and the 'exhaust valve open' method. The 'camshaft mark' method can only be used on the D7F engine, however, the

'exhaust valve open' method can be used on both engines.

Camshaft mark method D7F engine

6 Turn the crankshaft to bring No 1 piston to TDC on compression, as described in Section 3. Do not lock the crankshaft in position. Continue to turn the crankshaft until the first of the valve clearance adjustment marks (semi-circular marks) on the camshaft sprocket is aligned with the reference mark on the engine mounting bracket/upper timing belt cover, or the valve cover, as applicable (if necessary, temporarily refit the valve cover to check this) (see illustration).

4.6 On the D7F engine, the first of the valve clearance adjustment marks (A), marked E1-E3 on the camshaft sprocket spoke, should be aligned with the reference mark (B) on the valve cover
