Fish atlas of the Celtic Sea, North Sea, and Baltic Sea

Henk J.L. Heessen, Niels Daan, Jim R. Ellis, 2023-09-14 The atlas presents a unique set of abundance data to describe the spatial depth size and temporal distribution of demersal and pelagic fish species over an extensive marine area together with accounts of their biology A large number of pictures graphs and distribution maps illustrate the text By largely avoiding or at least explaining scientific terms and providing extensive references the book should be useful for both laymen and scientists The quantitative information on some 200 fish taxa is derived from 72 000 stations fished by research vessels during the period 1977 2013 The area covers the northwest European shelf from west of Ireland to the central Baltic Sea and from Brittany to the Shetlands Although the surveys extend beyond the shelf edge only taxa reported at least once in waters less than 200 m are included Typical deep water species and typical fresh water species are excluded We hope this publication will contribute to gaining a better understanding of the ocean ecosystems

Amazonian Floodplain Forests

Wolfgang J. Junk, Maria T. F. Piedade, Florian Wittmann, Jochen Schöngart, Pia Parolin, 2010-09-27 Central Amazonian floodplain forests are an unique and endangered ecosystem The forests grow in areas that are annually flooded by large rivers during mean periods of up to 8 months and at depths of up to 10 m Despite this severe stress these forests consist of over 1 000 species and are by far the most species rich floodplain forests worldwide The trees show a broad range of morphological anatomical physiological and phenological adaptations that enable them not only to survive the adverse environmental conditions but also to produce large amounts of biomass when the nutrient levels in water and soils are sufficiently high This is the case in the floodplains of white water rivers which are used for fisheries agriculture and cattle ranching but which also have a high potential for the production of timber and non timber products when adequately managed Latest research on ecophysiology gives insight how tree species adapt to the oscillating flood pulse focusing on their photosynthesis respiration sap flow biochemistry phenology wood and leaf anatomy root morphology and functioning fruit chemistry seed germination seedling establishment nitrogen fixation and genetic variability Based on tree ages lifetime growth rates and net primary production new concepts are developed to improve the sustainability of traditional forest managements in the background of an integrated natural resource management This is the first integrative book on the functioning and ecologically oriented use of

floodplain forests in the tropics and sub tropics It provides fundamental knowledge for scientist students foresters and other professionals on their distribution evolution and phytogeography This book is an excellent testimony to the interdisciplinary collaboration of a group of very dedicated scientists to unravel the functioning of the Amazonian Floodplain forests They have brought together a highly valuable contribution on the distribution ecology primary production ecophysiology typology biodiversity and human use of these forests offering recommendations for sustainable management and future projects in science and development of these unique wetland ecosystems It lays a solid scientific foundation for wetland ecologists foresters environmentalists wetland managers and all those interested in sustainable management in the tropics and subtropics Brij Gopal Executive Vice President International Society for Limnology SIL
