

11.11a Refit each follower to the cylinder head ...

one into its original location in the cylinder head. Ensure each shim is correctly located in the top of the its relevant follower (see illustrations).

12 Lubricate the camshaft followers with clean engine oil then lay the camshaft in position (see illustration). Ensure the crankshaft pulley notch is still correctly aligned with the pointer on the oil pump cover and the injection pump sprocket is locked in position. Position the camshaft so that the lobes of No 1 cylinder are pointing upwards and the sprocket locating pin is uppermost.

13 Ensure the mating surfaces of the bearing caps and cylinder head are clean and dry and lubricate the camshaft journals and lobes with clean engine oil.

14 Apply a smear of sealant to the areas of the cylinder head No 1 bearing cap mating surface, on each side of the camshaft end (see illustration).

15 Refit the camshaft bearing caps in their original locations on the cylinder head. The caps are numbered 1 to 5 (No 1 cap being at the timing belt end of the engine) and the arrow cast onto the top of each cap should point towards the timing belt end of the engine.

16 Refit the bearing cap nuts, tightening them by hand only. Working in the specified sequence, tighten the nuts by one turn at a time to gradually impose the pressure of the valve springs on the bearing caps (see

11.11b ... and refit the shim, ensuring it is correctly seated

illustration). Repeat this sequence until all bearing caps are in contact with the cylinder head then go around in the specified sequence and tighten them to the specified torque.

**Caution:** If the bearing cap bolts are carelessly tightened, the bearing caps might break. If any bearing cap breaks then the complete cylinder head assembly must be renewed; the bearing caps are matched to the head and are not available separately.

17 Fit a new camshaft oil seal as described in Section 9.

18 Refit the timing belt rear cover retaining bolts and tighten them securely.

19 Refit the camshaft sprocket and timing belt as described in Sections 7 and 8.

20 Check the valve clearances as described in Section 10 then refit the camshaft cover as described in Section 4.

11.12 Lubricate the bearings with clean engine oil then lay the camshaft in position

## 12 Cylinder head – removal and refitting

**Caution:** Be careful not to allow dirt into the fuel injection pump or injector pipes during this procedure.

**Note:** New cylinder head bolts will be required on refitting.

### Removal

1 Drain the cooling system as described in Chapter 1.

2 Remove the inlet and exhaust manifolds as described in Chapter 4A.

3 Remove the camshaft sprocket as described in Section 8.

4 Slacken and remove the bolts securing the timing belt rear cover to the end of the cylinder head.

11.14 Apply sealant to the cylinder head mating surface of No 1 camshaft bearing cap (arrowed) then refit the caps ensuring the camshaft locating pin is correctly positioned (A)

11.16 Camshaft bearing cap tightening sequence
