

These are the different forms to represent the ohms law.

- Ohms law states that at constant temperature potential difference across the element is directly proportional to current flowing through the element.

$$V = R \times I \text{ and } I = G \times V \text{ and } G = \frac{1}{R}$$

- Ohms law states that at constant temperature current density is directly proportional to field intensity.

$$J = \sigma \cdot E,$$

where J is the current density,

σ is conductivity in siemens and

E is Electric Field Intensity

- Ohms law is valid only when temperature and conductivity of the material is constant.
