**Neuroprosthetic Supersystems Architecture** Matthew E. Gladden, 2017-05-13. This volume serves as a resource for the design and analysis of neuroprosthetic supersystems, which can be defined as organizations, either small or large, simple or complex, whose human members have been neuroprosthetically augmented. While numerous other texts focus on the biomedical engineering of neuroprostheses as technological devices or on the biocybernetic engineering of the host device system comprising a neuroprosthesis and its human host, this volume presents a unique investigation of the intentional creation of higher-order supersystems that allow multiple neuroprosthetically augmented human beings to interact with one another and with external information systems in order to accomplish some shared task. In essence, this can be understood as the work of designing and managing neuroprosthetically enhanced organizations. Individual chapters present an ontology of the neuroprosthesis as a computing device, a biocybernetic ontology of the host device system, an ontology of the neuroprosthesis as an instrument of cyborgization, motivating and inhibiting factors for the organizational deployment of posthumanizing neuroprostheses by military organizations and other early adopters, an introduction to enterprise architecture in the context of technological posthumanization, an exploration of the implications of neuroprosthetic augmentation for enterprise architecture and considerations for the development of effective network topologies for neuroprosthetically augmented organizations. The conceptual frameworks formulated within this book offer a wide range of tools that can be of use to policymakers, ethicists, neuroprosthetic device manufacturers, organizational decision makers, and others who must analyze or manage the complex legal, ethical, and managerial implications that result from the use of emerging neuroprosthetic technologies within an organizational context.

Children's Literature and Culture Rebecca Rowe, 2025-08-08. *Children's Literature and Culture: An Introduction* guides readers in the study of culture in and around and through children's literature. Children's literature has long been used as a mechanism by which a culture passes its values from one generation to the next. Because of this culturally didactic purpose, children's literature can be viewed as one of the most fruitful areas of study of any given culture. At the same time, studying the cultures from which works of children's literature emerge and in which they circulate can also help better understand not only the ideas of childhood that underpin individual texts for children but the role they play in the construction and transmission of different cultural ideologies. This book teaches readers this double work of using culture to understand children's literature and vice versa. This volume traces the scholarly methodologies and histories that have attended the study of each of the 20 chapters given subject from the representation of race in and around children's literature to questions of censorship to how libraries can and do shape children's literature. In the process, it prepares readers to confidently enter and forward scholarly debates and to teach such debates to their own students.
