parametric analysis: in MATLAB and Excel Solver Dinesh Gupta, 2014-05-01 Since the late 1940s linear programming models have been used for many different purposes Airline companies apply these models to optimize their use of planes and staff NASA has been using them for years to optimize their use of limited resources Oil companies use them to optimize their refinery operations Small and medium sized businesses use linear programming to solve a huge variety of problems often involving resource allocation In my study a typical product mix problem in a manufacturing system producing two products each product consists of two sub assemblies is solved for its optimal solution through the use of the latest versions of MATLAB having the command `simlp` which is very much like `linprog` As analysts we try to find a good enough solution for the decision maker to make a final decision Our attempt is to give the mathematical description of the product mix optimization

problem and bring the problem into a form ready to call MATLAB's `simlp` command. The objective of this study is to find the best product mix that maximizes profit. The graph obtained using MATLAB commands give the shaded area enclosed by the constraints called the feasible region which is the set of points satisfying all the constraints. To find the optimal solution we look at the lines of equal profit to find the corner of the feasible region which yield the highest profit. This corner can be found out at the farthest line of equal profit which still touches the feasible region. The most critical part is the sensitivity analysis using Excel Solver and Parametric Analysis using computer software which allows us to study the effect on optimal solution due to discrete and continuous change in parameters of the LP model including to identify bottlenecks. We have examined other options like product outsourcing, one time cost, cross training of one operator, manufacturing of hypothetical third product on under utilized machines and optimal sequencing of jobs on machines.

Corporate Governance, Capital Markets, and Capital Budgeting Baliira Kalyebara, Sardar M. N. Islam, 2013-07-31. The primary contribution of this book is to integrate the important disciplines which simultaneously impact the investment appraisal process. The book presents a study that develops a new approach to investment appraisal which uses a multiple objective linear programming MOLP model to integrate the selected disciplines which include capital markets, corporate governance and capital budgeting. The research covers two case studies: one in the e-commerce sector and another in the airline industry in which the above disciplines are integrated. Readers from the areas of corporate governance, regulation and accounting would find the survey of different approaches and the new integrated optimization approach particularly useful.

Quantitative Decision Making with Spreadsheet Applications Lawrence L. Lapin, William D. Whisler, 2002. Written for students with a background in algebra, this text provides a complete and modern treatment of basic management science methodology. The authors survey the variety and power of management science tools working to alleviate students' apprehension about the subject and to enable students to recognize on the job situations in which management science methodology can be successfully employed. Emphasizing modeling skills for students of varying mathematical backgrounds, the authors explain how to use Microsoft Excel spreadsheets to build skills as they work through problems. In general, problems are broken into several parts to make difficult concepts easy for students to learn. This book's modular structure affords instructors maximum flexibility. This text contains a special student version of Palisade Corporation's DecisionTools Suite containing Risk PrecisionTree, BestFit, TopRank and RiskView. This software is expressly provided for student use and requires student authorization to unlock the software for its full one year license. Professional customers may use the software for 30 days at which point they must contact Palisade Corporation for a professional version should they wish to continue using the software.

This book combines the quantitative decision informing techniques of management science and operations research with the data-centric techniques found throughout the world of analytics. The material uses only standard Excel spreadsheet features and functions for creating models. Using a step-by-step

approach readers learn a unified architecture for sensitivity scenario simulation decision and optimization analysis Spreadsheets with numerous screenshots support visual hands on learning and provide some surprising innovations Special influence diagrams and non intimidating but accurate terminology help explain the logic of the models and calculations Well structured chapters include guideposts enrichment and curated links to valuable external resources Readers are encouraged to own their learning and think about future trajectories for themselves and the field This book helps all readers quickly learn tools and concepts to use right away and to expand throughout a career The book includes access to a companion website featuring workbooks and other valuable materials to support learning

Linear And Nonlinear Optimization Using Spreadsheets: Examples For Prescriptive, Predictive And Descriptive Analytics Michael J Brusco, Stephanie Stahl, 2024-10-08 The use of spreadsheets to obtain solutions to a diverse array of examples offers a reader friendly way of addressing a topic optimization that can sometimes be viewed as intimidating Many people are readily familiar with spreadsheets and how they work yet are apt to be unaware of the incredible power of Excel for solving some rather complex optimization problems A major goal of the book is to sell readers on why it is so important to understand optimization and a large collection of examples for a wide range of business decision making areas e g production planning and scheduling workforce planning and scheduling location and supply chain distribution location of emergency services assembly line balancing vehicle routing project scheduling revenue management advertising product design payout schedules productivity measurement investment portfolio management sports league scheduling ranking models etc affords a practical mechanism for achieving that goal Another important contribution of the book is that it provides coverage of the mechanics of some common yet sophisticated statistical methods regression logistic regression discriminant analysis factor analysis and cluster analysis which are often opaque to many users of such methods

Corporate Governance Optimisation Choirunnisa Arifa, Sardar Islam, 2025-09-18 Corporate Governance Optimisation introduces an innovative approach to addressing some of the most pressing challenges in modern corporate governance Combining game theory mechanism design and hedge accounting this research monograph offers a comprehensive framework for resolving agency conflicts mitigating financial risks and improving organisational performance At the heart of this book is an integrated model that unites governance risk management and hedge accounting demonstrating how these elements work together to address information asymmetry incentive misalignment and decision making complexities Grounded in rigorous research and real life data the book provides practical insights into how hedge accounting can stabilise financial outcomes support effective governance and enhance corporate value Designed for academics researchers and professionals in accounting finance and corporate governance this book bridges theory and practice offering a robust foundation for understanding and applying advanced governance models It is particularly valuable for those interested in how mathematical frameworks like game theory can be used to solve real world corporate challenges While rooted in financial optimisation the book s findings have broad implications for policy

strategy and risk management in diverse organisational contexts **Optimierungssysteme** Leena Suhl, Taïeb Mellouli, 2013-07-11 Dieses Buch bietet eine Einführung in angewandte Optimierungssysteme für wirtschaftswissenschaftliche Anwendungen. Es konzentriert sich methodisch auf den praxisrelevanten Bereich der linearen und gemischt ganzzahligen Optimierung sowie auf weitere bewährte Methodiken wie heuristische Verfahren und Simulation. Neben der Aufführung wichtiger Modelleigenschaften und Lösungsmethoden werden Techniken der Modellierung praktischer Aufgabenstellungen besprochen. Wichtige Netzwerkmodelle wie kürzeste Wege, Flussmodelle mit minimalen Kosten sowie Tourenplanungs- und Standortplanungsmodelle werden zusammen mit Anwendungen in der Transportlogistik für den Personen- und Güterverkehr diskutiert.
