Abstract: This study examined the effects of a 12-week, 100% bodyweight resistance training program on the muscle strength and body composition of 10 sedentary, middle-aged men. The program consisted of three sessions per week, each targeting a different muscle group. The results showed that the program significantly increased muscle strength and body composition, with no significant changes in body weight or body fat percentage. The findings suggest that a 12-week, 100% bodyweight resistance training program can effectively improve muscle strength and body composition in sedentary, middle-aged men.
