Examining Evolutionary Trends in Equus and its Close Relatives from Five Continents Raymond Louis Bernor,Gina Marie Semprebon,Florent Rivals,Leonardo Santos Avilla,Eric Scott,2020-03-12 Evolution of the horse has been an often cited primary example of evolution as well as one of the classic and important stories in paleontology for over a century and a half due to their rich fossil record across 5 continents North America South America Europe Asia and Africa The recent horse has served a profound role in human ancestry including agriculture commerce sport transport warfare and in prehistory for the subsistence of humans Many studies have examined the evolution of the Equidae and chronicled the striking changes in skulls dentition limbs and body size which have long been perceived to be a response to environmental shifts through time Most comprehensive studies heretofore have 1 focused on the Great Transformation

changes that occurred in the early Miocene 2 involved tracking long term diversity or paleoecological trends on a single continent or within a geographical locality or 3 concentrated on the 3 toed hipparions The Plio Pleistocene evolutionary stage of horse evolution is punctuated by the great climatic fluctuations of the Quaternary beginning 2.6 Ma which influenced Equus evolution biogeographic dispersion and adaptation on a nearly global scale The evolutionary biology of Equus evolution across its entire range remains relatively poorly understood and often highly controversial Some of this lack of understanding is due to assumptions that have arisen because of the relatively derived craniodental and postcranial anatomy of Equus and its close relatives which has seemed to imply that that these forms occupied relatively homogenous and narrow dietary and locomotor niches notions that have not been adequately addressed and rigorously tested Other challenges have revolved around teasing apart environmentally driven adaptation versus phylogenetically defined morphological change Geochronologic age control of localities geographic provinces and continents has improved but in no way is absolute and can be reexamined in our proposed volume Temporal resolution for paleodietary paleohabitat and paleoecological interpretations are also challenging for understanding the evolution of Equus Our proposed volume attempts to assemble a group of experts who will address multiple dimensions of Equus evolution in time and space Serious Games Stefan Göbel, Augusto Garcia-Agundez, Thomas Tregel, Minhua Ma, Jannicke Baalsrud Hauge, Manuel Oliveira, Tim Marsh, Polona Caserman, 2018-10-30 This book constitutes the proceedings of the 4th International Conference on Serious Games JCSG 2018 held in Darmstadt Germany in November 2018 The 15 full and 12 short papers presented in this volume were carefully reviewed and selected from 40 submissions They were organized in topical sections named serious games studies game based learning and teaching game development serious games design models tools and emerging technologies and serious games for health
