**New York State Education ,1928      The Political Discourse of Spatial Disparities** Ferenc Gyuris,2013-10-30 This work aims to provide unique insights into the multidisciplinary research on spatial disparities from an unconventional point of view It breaks with the conventional narrative that tends to interpret this theoretical tradition as a

series of factual contributions to a better understanding of the issue. Instead, related theories are investigated in their political, economic and social contexts and spatial disparity research is presented as a political discourse. It also reveals how the propagandistic problematization or de-problematization of geographical inequalities serves the substantiation of political goals while taking advantage of the legitimate authority of science and the image of scientific objectivity. The book explains how the discourse has functioned from 19th century social physics over the Cold War period up to Marxist geographies of the current neoliberal age and in what way and to what extent political considerations prevent related concepts producing objective knowledge about the complex phenomenon of spatial inequalities.

*Encyclopedia of Global Warming and Climate Change, Second Edition* S. George Philander, 2012-07-10 This Second Edition of an academic yet non-technical resource examines the effects, history and ongoing research in the important field of global warming and climate change.

Following long traditions of the discipline of geography this text incorporates words, maps, drawings, photographs and numerical data to present its information in an engaging way. After covering beneficial precursor topics such as the basics of physical and human geography the text explores fifteen regions of the US and Canada. The authors observe and describe our planet's geography in thorough and accessible detail while laying out the spatial basics of the location, shape and size of the different regions and summarizes their most distinctive thematic qualities. Physical topics covered include the region's topography and landforms, soils, climate, hydrography, vegetation and wildlife. The human topics include the region's population, the ethnicities and settlement history of its people, economic activities including agriculture, forestry, mining, fishing, manufacturing and service industries, cities and transportation. In-depth essays expand on specific topics of interest and importance while outlook sections prognosticate about the near future of the regions. Each chapter concludes with a bibliography of books, articles and reports that provide further sources for the interested reader.
