Portraits of Labor Market Exclusion Ramya Sundaram,Ulrich Hoerning,Natasha de Andrade Falcão,Natalia Millán,Carla Tokman,Michele Zini,2015-07-16 Portraits of Labor Market Exclusion presents profiles or portraits of individuals who have limited labor market attachment It is widely accepted that those with limited attachment to the labor market are a highly heterogeneous group including for instance recent job losers long term unemployed school leavers with no labor market experience those close to retirement age or people with caring responsibilities and that understanding their circumstances and potential barriers is an essential prerequisite for designing and implementing a tailored and effective mix of policy support and incentives The report takes a comprehensive view focusing on both the labor market attachment of a country's out of work population and the social assistance package and poverty profile of the same segment of the population In essence the report looks at individuals through the lenses of both poverty welfare status and labor market indicators and in doing so the portraits helps move the dialogue from a purely labor market centric view to a broader dialogue that includes social policy as a whole This is an important shift for instance social protection programs such as family benefits and maternity benefits and broader social policy issues such as retirement ages often have a great impact on who remains inactive Specifically the report presents portraits of the out of work population of six countries Bulgaria Estonia Greece Hungary Lithuania and Romania in terms of distance from the labor market human capital and labor supply conditions as well as demographic conditions The analysis relies on the European Union Statistics of Income and Living Conditions EU SILC surveys for the years 2007 to 2011 Latent class analysis methodology allows multidimensional profiling of the out of work population and identifies classes or groups of out of work individuals that are as homogeneous as possible within each class according to a set of observable characteristics and as distant as possible between classes Consequently this analysis provides a much richer glimpse of the very different barriers to labor market integration that these various groups experience considerably augmenting the limited amount of information contained in traditional descriptive statistics A

Constructional Account of Verb-Forming Suffixation Jacqueline Laws,2023-09-15 The range of meanings expressed by derivatives formed by the attachment of the four principal verb forming suffixes *-ate* *-en* *-ify* and *-ize* has been the subject of extensive analysis for over two decades From a descriptive perspective the research reported in this volume constitutes the most comprehensive usage based analysis of verbal derivatives available to date and provides register based and diachronic comparisons of usage and distribution patterns across corpora of spoken English The semantic analysis adopts the seven well established semantic categories of verbal derivatives and extends the set to twenty by including further meaning classes documented in the morphological literature and additional senses that emerged from the contextualized analysis of complex verbs in the datasets From a theoretical standpoint the novel approach involves the explicit linking of affix schemas to

argument structure constructions and proposes a unified model of verb forming suffixation that accounts for the multi functional characteristics of verbal derivatives from a constructional perspective Machine Learning in Translation Corpora Processing Krzysztof Wolk, 2019-02-25 This book reviews ways to improve statistical machine speech translation between Polish and English Research has been conducted mostly on dictionary based rule based and syntax based machine translation techniques Most popular methodologies and tools are not well suited for the Polish language and therefore require adaptation and language resources are lacking in parallel and monolingual data The main objective of this volume to develop an automatic and robust Polish to English translation system to meet specific translation requirements and to develop bilingual textual resources by mining comparable corpora **Advances in Corpus Applications in Literary and Translation Studies** Riccardo Moratto, Defeng Li, 2022-12-26 Professor Riccardo Moratto and Professor Defeng Li present contributions focusing on the interdisciplinarity of corpus studies with a special emphasis on literary and translation studies which offer a broad and varied picture of the promise and potential of methods and approaches Inside scholars share their research findings concerning current advances in corpus applications in literary and translation studies and explore possible and tangible collaborative research projects The volume is split into two sections focusing on the applications of corpora in literary studies and translation studies Issues explored include historical backgrounds current trends theories methodologies operational methods and techniques as well as training of research students This international dynamic and interdisciplinary exploration of corpus studies and corpus application in various cultural contexts and different countries will provide valuable insights for any researcher in literary or translation studies who wishes to have a better understanding when working with corpora *Clinician's Guide to Validity Assessment and Management in Neuropsychology* Ryan W.
