Mokarem, 2006 Pavement surface texture is measured in a variety of ways in Virginia Two methods commonly used are ASTM E 965 Standard Test Method for Measuring Pavement Macrotexture Depth Using a Volumetric Technique known as the sand patch test and ASTM E 2157 Standard Test Method for Measuring Pavement Macrotexture Properties Using the Circular Track CT Meter In September 2005 staff from the Virginia Transportation Research Council inquired about using the Digital Surface Roughness Meter DSRM to measure the surface texture of several concrete and asphalt surfaces Measurements were taken on concrete and asphalt surfaces using the DSRM CT meter and sand patch test and the results were compared From the data obtained there appears to be a good correlation among the results of the three methods The DSRM and sand patch tests appear to be more accurate on surfaces that are not uniform However this may be because the center of the rotating arm of the CT meter may have missed particular non uniform areas on the testing surface The use of the DSRM and CT meter devices also reduces the probability of human error The sand patch test is exposed to a greater probability of human error it is a test that cannot be performed quickly without comprising accuracy The DSRM is a better device to use under a time constraint      Chemical Toxicity Prediction

Mark Cronin, Judith Madden, Steven Enoch, David Roberts, 2013-10-03 The aim of this book is to provide the scientific background to using the formation of chemical categories or groups of molecules to allow for read across i.e. the prediction of toxicity from chemical structure. It covers the scientific basis for this approach to toxicity prediction including the methods to group compounds structural analogues and or similarity mechanism of action and the tools to achieve this. The approaches to perform read across within a chemical category are also described. Chemical Toxicity Prediction provides concise practical guidance for those wishing to apply these methods in risk hazard assessment and will be illustrated with case studies. This is the first book that addresses the concept of category formation and read across for toxicity prediction specifically. This topic has really taken off in the past few years due to concerns over dealing with the REACH legislation and also due to the availability of the OECD Q SAR Toolbox. Much lengthy and complex guidance is available on category formation e.g. from the OECD and to a lesser extent the European Chemicals Agency but there is no one single source of information that covers all techniques in a concise user friendly format. *Logistics Support Plan*, 1972 Department of the Army Pamphlet, 1972 *Popular Mechanics*, 1988-12 Popular Mechanics inspires, instructs and influences readers to help them master the modern world.
