

Hunter-Gatherers

The Paleolithic Age

Historians call the early period of human history the Stone Age. They do this because it was the time when people used stone to make tools and weapons. The earliest part of this period was the **Paleolithic** (pay • lee • uh • LITH • thick) Age. In Greek, *paleolithic* means "old stone." Therefore, the Paleolithic Age is also called the Old Stone Age. The Paleolithic Age began about 2.5 million years ago and lasted until around 8,000 B.C. Remember, that is about 4,500 years earlier than recorded time, which starts about 5,500 years ago.

Surviving in the Paleolithic Age

Try to imagine what life was like during the Paleolithic Age. Think about living in a time long before any roads, farms, or villages existed. Paleolithic people often moved around in search of food. They were **nomads** (NOH • mads), or people who regularly move from place to place to survive. They traveled in groups, or bands, of about 20 or 30 members.

Paleolithic people survived by hunting and gathering. The search for food was their main activity, and it was often difficult. They had to learn which animals to hunt and which plants to eat. Paleolithic people hunted buffalo, bison, wild goats, reindeer, and other animals, depending on where they lived. Along coastal areas, they fished. These early people also gathered wild nuts, berries, fruits, wild grains, and green plants.

Finding Food

Paleolithic men and women performed different tasks within the group. Men—not women—hunted large animals. They often had to search far from their camp. Men had to learn how animals behaved and how to hunt them. They had to develop tracking methods. At first, men used clubs or drove the animals off cliffs to kill them. Over time, however, Paleolithic people developed tools and weapons to help them hunt. The traps and spears they made increased their chances of killing their prey.

Women stayed close to the camp, which was often located near a stream or other body of water. They looked after the children and searched nearby woods and meadows for berries, nuts, and grains. Everyone worked to find food, because it was the key to the group's survival.

Some scientists believe that an equal relationship existed between Paleolithic men and women. It is likely that both made decisions that affected the band or group. Some evidence suggests that some men and women may have hunted in monogamous pairs. This means that a man and a woman worked together to find food for themselves and their children. Such groupings became the first families.

Prehistoric Hunter-Gatherers
RABIGER,2014-06-28 Prehistoric Hunters Gatherers The Emergence of Cultural Complexity Constructing Frames of Reference Lewis R. Binford,2019-05-07 Many consider Lewis Binford to be the single most influential figure in archaeology in the last half century His contributions to the New Archaeology changed the course of the field as he argued for the development of a scientifically rigorous framework to guide the excavation and interpretation of the archaeological record This book the culmination of Binford s intellectual legacy thus far presents a detailed description of his methodology and its significance for understanding hunter gatherer cultures on a global basis This landmark publication will be an important step in understanding the great process of cultural evolution and will change the way archaeology proceeds as a scientific enterprise This work provides a major synthesis of an enormous body of cultural and environmental information and offers many original insights into the past Binford helped pioneer what is now called ethnoarchaeology the study of living societies to help explain cultural patterns in the archaeological record and this book is grounded on a detailed analysis of ethnographic data from about 340 historically known hunter gatherer populations The methodological framework based on this data will reshape the paradigms through which we understand human culture for years to come *Indigenous Cognition: Functioning in Cultural Context* J.W. Berry,S.H Irvine,E.G. Hunt,2012-12-06 Cognitive psychology has established itself as one of the major branches of the discipline with much to its credit in such areas as decision making information processing memory and learning Similarly the assessment of cognitive abilities has become one of the hallmarks of the practice of psychology in the school in the factory and in the clinic In recent years these two branches have begun to interact and the two approaches have begun mutually to engage each other A third trend that of cross cultural cognitive psychology has been informed both by experimental cognitive sciences and by the practice of ability assessment see for example Berry and Dasen 1974 Cole and Scribner 1974 However the reverse has not been true the cognitive processes and abilities of much of the world s peoples studied by cross cultural psychologists have not been introduced to psychologists working in these two

Western traditions see Irvine and Berry 1987 This volume attempts to begin this introduction by asking the question What is known about the cognitive functions of other peoples that could enable extant psychology to become more comprehensive to attain a universal cognitive psychology Who are these other peoples and by extension what then is indigenous cognition The first question is rather easy to answer but the second is more difficult

The Oxford Handbook of the Archaeology and Anthropology of Hunter-Gatherers Vicki Cummings, Peter Jordan, Marek Zvelebil, 2014-04-24 For more than a century the study of hunting and gathering societies has been central to the development of both archaeology and anthropology as academic disciplines and

has also generated widespread public interest and debate The Oxford Handbook of the Archaeology and Anthropology of Hunter Gatherers provides a comprehensive review of hunter gatherer studies to date including critical engagements with older debates new theoretical perspectives and renewed obligations for greater engagement between researchers and indigenous communities Chapters provide in depth archaeological historical and anthropological case studies and examine far reaching questions about human social relations attitudes to technology ecology and management of resources and the environment as well as issues of diet health and gender relations all central topics in hunter gatherer research but also themes that have great relevance for modern global society and its future challenges The Handbook also provides a strategic vision for how the integration of new methods approaches and study regions can ensure that future research into the archaeology and anthropology of hunter gatherers will continue to deliver penetrating insights into the factors that underlie all human diversity

Human Institutions Jonathan H. Turner, 2003 In recent years the New Institutionalism has focused more on organizations in their social and cultural environments than on societal level institutional systems Thus missing from these studies has been a larger sociological analysis of institutions per se In his newest book leading social theorist Jonathan H Turner offers a creative richly grounded reinterpretation of social evolution He resurrects a level of analysis undertaken by earlier functionalist theorists but with a new found emphasis that of discovering the larger forces driving the formation of human institutional systems Only by exploring the larger macro dynamics can the institutions of economy kinship religion polity law and education be fully understood as Turner persuasively shows in this magisterial explication of twenty millennia of human social life

The Language of Hunter-Gatherers Tom Güldemann, Patrick McConvell, Richard A. Rhodes, 2020-02-27 Offers a linguistic window into contemporary hunter gatherer societies looking at how they survive and interface with agricultural and industrial societies

Social Structures Barry Wellman, S. D. Berkowitz, 1988-01-29 This study of social structures looks at the network approach It contains non technical articles that contrast structural analysis with other social scientific approaches It deals with individual behaviour and identity and with neighbourhood and community ties It examines the relationships within and between organizations discussing how firms occupy strategically appropriate niches It also explores the impact of the growth of the Internet equating computer networks as social networks connecting people in virtual communities and collaborative work

Complex Hunter Gatherers William C Prentiss, Ian Kuijt, 2004-09-15 A broad synthesis of the archaeology of the Plateau region of the Pacific Northwest and the evolution and organization of the complex hunter gatherers in general

Violence and Warfare among Hunter-Gatherers Mark W Allen, Terry L Jones, 2016-07-01 How did warfare originate Was it human genetics Social competition The rise of complexity Intensive study of the long term hunter gatherer past brings us closer to an answer The original chapters in this volume examine cultural areas on five continents where there is archaeological ethnographic and historical evidence for hunter gatherer conflict despite high degrees of mobility small populations and relatively egalitarian social structures Their

controversial conclusions will elicit interest among anthropologists archaeologists and those in conflict studies *Darwinian Politics* Paul H. Rubin, 2002 An examination of political behaviour from a modern evolutionary perspective Paul H Rubin discusses group or social behaviour including ethnic and racial conflict altruism and co operation envy political power and the role of religion in politics **How Culture Makes Us Human** Dwight W Read, 2016-05-23 What separates modern humans from our primate cousins are we a mere blink in the march of evolution or does human culture represent the definitive evolutionary turn Dwight Read explores the dilemma in this engaging thought provoking book taking readers through an evolutionary odyssey from our primate beginnings through the development of culture and social organization He assesses the two major trends in this field one that sees us as a logical culmination of primate evolution arguing that the rudiments of culture exist in primates and even magpies and another that views the human transition as so radical that the primate model provides no foundation for understanding human dynamics Expertly synthesizing a wide body of evidence from the anthropological and life sciences in accessible prose Read s book will interest a broad readership from experts to undergraduate students and the general public
