Pepin,Bettina Roesken-Winter,2014-10-21 This book connects seminal work in affect research and moves forward to provide
a developing perspective on affect as the decisive variable of the mathematics classroom In particular the book contributes
and investigates new conceptual frameworks and new methodological tools in affect research and introduces the new field of
collectives to explore affect systems in diverse settings Investigated by internationally renowned scholars the book is build up
in three dimensions The first part of the book provides an overview of selected theoretical frames theoretical lenses to study
the mosaic of relationships and interactions in the field of affect In the second part the theory is enriched by empirical
research studies and provides relevant findings in terms of developing deeper understandings of individuals and collectives
affective systems in mathematics education Here pupil and teacher beliefs and affect systems are examined more closely The
final part investigates the methodological tools used and needed in affect research How can the different methodological
designs contribute data which help us to develop better understandings of teachers and pupils affect systems for teaching
and learning mathematics and in which ways are knowledge and affect related **Applications of Mathematical**

Data-Driven Modelling with Fuzzy Sets Said Broumi,D. Nagarajan,Michael Gr. Voskoglou,S. A. Edalatpanah,2024-07-17 Zadeh introduced in 1965 the theory of fuzzy sets in which truth values are modelled by numbers in the unit interval $[0, 1]$ for tackling mathematically the frequently appearing

in everyday life partial truths In a second stage when membership functions were reinterpreted as possibility distributions fuzzy sets were extensively used to embrace uncertainty modelling Uncertainty is defined as the shortage of precise knowledge or complete information and possibility theory is devoted to the handling of incomplete information Zadeh articulated the relationship between possibility and probability noticing that what is probable must preliminarily be possible Following the Zadeh s fuzzy set various generalizations intuitionistic neutrosophic rough soft sets etc have been introduced enabling a more effective management of all types of the existing in real world uncertainty This book presents recent theoretical advances and applications of fuzzy sets and their extensions to Science Humanities and Education This book Presents a qualitative assessment of big data in the education sector using linguistic Quadri partitioned single valued neutrosophic soft sets Showcases application of n cylindrical fuzzy neutrosophic sets in education using neutrosophic affinity degree and neutrosophic similarity Index Covers scientific evaluation of student academic performance using single value neutrosophic Markov chain Illustrates multi granulation single valued neutrosophic probabilistic rough sets for teamwork assessment Examines estimation of distribution algorithm based on multiple attribute group decision making to evaluate teaching quality It is primarily written for Senior undergraduate and graduate students and academic researchers in the fields of electrical engineering electronics and communication engineering computer science and engineering
