Learning and Instruction Marcia C. Linn, Bat-Sheva Eylon, 2011-05-20 Science Learning and Instruction describes advances in understanding the nature of science learning and their implications for the design of science instruction. The authors show how design patterns, design principles, and professional development opportunities coalesce to create and sustain effective instruction in each primary scientific domain: earth science, life science, and physical science. Calling for more in-depth and less fleeting coverage of science topics in order to accomplish knowledge integration, the book highlights the importance of designing the instructional materials, the examples that are introduced in each scientific domain, and the professional development that accompanies these materials. It argues that unless all these efforts are made simultaneously, educators cannot hope to improve science learning outcomes. The book also addresses how many policies, including curriculum standards, guidelines, and standardized tests, work against the goal of integrative understanding and discusses opportunities to rethink science education policies based on research findings from instruction that emphasizes such understanding.

School Science and Mathematics, 1910 *Improving Learning Through Assessment Rubrics: Student Awareness of What and How They Learn* Gonsalves, Chahna, Pearson, Jayne, 2023-08-14 Assessment by rubrics has emerged as a tool with great potential to guide successful student learning from a competency-based approach. Rubrics as instruments that make it possible to share the criteria for carrying out learning and assessment tasks with students are excellent roadmaps for student learning, largely because they allow students to know what they are expected to do and what they are expected to achieve by carrying out the learning tasks. *Improving Learning Through Assessment Rubrics: Student Awareness of What and How They Learn* contributes to the improvement of what is being evaluated by identifying the strengths as well as the weaknesses of the didactic use of rubrics in the assessment of university learning. The book also provides a set of theoretical issues, methodological elements, and practical resources for the assessment of university learning using rubrics. Covering topics such as active learning, self-assessment, and teacher identity, this reference work is ideal for administrators, policymakers, researchers, scholars, academicians, practitioners, educators, and students.

Portable Technologies Robert Tinker, Joseph Krajcik, 2012-12-06 Education has traditionally studied the world by bringing it into the classroom. This can result in situated learning that appears to students to have no relevance outside the classroom. Students acquire inert, decontextualized knowledge that they cannot apply to real problems. The obvious solution to this shortcoming is to reverse the situation and bring the classroom to the phenomena to learn in a rich, real-world context. The problem with the real world is that it is complex and filled with interactions that are hard to sort out. The editors and authors believe that the right tools might help students with this sorting process and result in learning in rich contexts. This book is an account of a series of experiments designed to explore the validity of this insight.

Innovations in Science and Mathematics Education Michael J. Jacobson, Robert B. Kozma, 2012-12-06 The uses of technology in education have kindled great interest in recent years. Currently considerable resources are being expended to connect schools to the Internet to purchase powerful and increasingly affordable computers and on other implementations of educational technologies. However the mere availability of powerful globally connected computers is not sufficient to insure that students will learn particularly in subjects that pose considerable conceptual difficulties such as in science and mathematics. The true challenge is not just to put the newest technologies in our schools but to identify advanced ways to design and use these new technologies to advance learning. This book offers a snapshot of current work that is attempting to address this challenge. It provides valuable and timely information to science and mathematics educators educational and cognitive researchers instructional technologists and educational software developers educational policymakers and to scholars and students in these fields. *Yet More Everyday Science Mysteries* Richard Konicek-Moran, 2011 In the fourth book of this award winning series author Richard Konicek Moran explores 15 new mysteries children and adults encounter in their daily lives. Relating the mysteries to experiences familiar to elementary and middle school students the stories show how science is part of everyday life and initiate inquiry based learning by leaving each mystery without an ending. Students identify the problem to be solved formulate questions form hypotheses test their ideas and come up with possible explanations. **BSCS Science Technology : Investigating Earth Systems, Teacher Edition** ,2005 **The Science Teacher's Toolbox** Tara C.
