On a philosophical level this is about the landscapes and built environments that reveal history through place and time It is about new perspectives the views of history possible with Remote Sensing and fostered in part by immersive interactive 3D and 4D environments discussed in this volume These perspectives are both the result and the implementation of technological cultural and epistemological advances in record keeping interpretation and conceptualization Methodology presented here builds on the current ease and speed in collecting data sets on the scale of the object site locality and landscape As this volume shows many disciplines surrounding archaeology and related cultural studies are currently involved in Remote Sensing and its relevance will only increase as the methodology expands
