Teaching the Large College Class Frank Heppner, 2007-10-08 Teaching large classes is a fact of life for professors at many institutions. In addition to pedagogy, instructors of these courses must also be concerned with legal, ethical, financial, technological, personnel, and management issues. Virtually all introductory courses are large ones, as are the popular intermediate courses at large institutions. Typically, little or no training or instruction is provided to new professors about how to manage large classes successfully. This book is a valuable resource for any college teacher, adjunct or full time, facing a large class. It will also be useful for college administrators who might want to issue it to teachers, especially adjuncts assigned to large classes for the first time. A distillation of years of experience by the author, who started his college teaching career in 1969 in teaching large classes and in coaching other professors to do the same, this guide is concise and user friendly. It employs teaching as acting as a common theme with many practical examples covering all of the major aspects of organizing, managing, and teaching a large lecture course in any field. An Introduction to Psychometrics and Psychological Assessment Colin Cooper, 2023-05-09 An Introduction to Psychometrics and Psychological Assessment is the successor to Cooper's prize-winning book, *Psychological Testing: Theory and Practice*. This expanded and updated volume shows how psychological questionnaires and tests can be chosen, administered, scored, interpreted, and developed. In providing students, researchers, test users, test developers, and practitioners in the social sciences, education, and health with an evaluative guide to choosing, using, interpreting, and developing tests, it provides readers a thorough grasp of the principles and limitations of testing together with the necessary methodological detail. This book has three distinctive features. First, it stresses the basic logic of psychological assessment without getting bogged down with mathematics; the spreadsheet simulations and utilities which are integrated into the text allow users to explore how numbers behave rather than reading equations. Readers will learn by doing. Second, it covers both the theory behind psychological assessment and the practicalities of locating, designing, and using tests and interpreting their scores. Finally, it is evaluative. Rather than just describing concepts such as test reliability or adaptive testing, it stresses the underlying principles, merits, and drawbacks of each approach to assessment and methods of developing and evaluating questionnaires and tests. Unusually for an introductory text, it includes coverage of several cutting-edge techniques, and this new edition expands the discussion on measurement invariance, methods of detecting and quantifying bias, and hierarchical factor models. It features added sections on best practices for translation of tests into other languages and problems of cultural bias, automatic item generation, the advantages, drawbacks, and practicalities of internet-based testing, generalizability theory, network analysis, dangerous assumptions made when scoring tests, the accuracy of tests used for assessing individuals, the two-way relationship between psychometrics and psychological theory. Aimed at non-mathematicians, this friendly and engaging text will help you to understand the fundamental principles of psychometrics that underpin the measurement of any

human characteristic using any psychological test Written by a leading figure in the field and accompanied by additional resources including a set of spreadsheets which use simulated data and other techniques to illustrate important issues this is an essential introduction for all students of psychology and related disciplines It assumes very little statistical background and is written for students studying psychological assessment or psychometrics and for researchers and practitioners who use questionnaires and tests to measure personality cognitive abilities educational attainment mood or motivation
