

ENPC 4th Edition: Practice Test

1. A preschooler has a small laceration that requires 2 stitches. The nurse covers the wound with a bandage knowing that it will comfort the child to have it covered. What is the developmental reason for this intervention?

- A.) Preschoolers are magical thinkers and imagine bandages keep their insides from coming out.
- B.) Preschoolers fear physical disability and believe a bandage will prevent disability.
- C.) Preschoolers explore orally and will likely chew or suck on the stitches if left uncovered.
- D.) Preschoolers are concerned with body image and don't want to appear different than peers. - Answer- A.) Preschoolers are magical thinkers and imagine bandages keep their insides from coming out.

Rationale: Preschoolers are magical and illogical thinkers and have difficulty distinguishing fantasy from reality. They have misconceptions about illness, injury, and bodily functions. For example, they perceive that if their skin is cut, they fear their insides will leak out. Covering a wound with a bandage helps them with this fear.

2. 7-month-old presents to the emergency department with a complaint of fever. Assessment reveals a patent airway and slight cyanosis around his lips and nail beds. He is alert and interactive. His vital signs are 38.5 C (101.3F), HR 134, RR 32, BP 78/54 mm Hg, and Spo2 84%. The nurse notes a healed surgical scar on his chest. Based on this assessment, what is the nurse's priority?

- A.) Administer ibuprofen to treat the fever.
- B.) Begin oxygen via a nonrebreather mask.
- C.) Obtain a surgical history.
- D.) Ask if the Spo2 is normal for him. - Answer- D.) Ask if the Spo2 is normal for him.

Rationale: Children with special healthcare needs may present differently than other children, but these differences may be normal. The surgical scar on the chest is likely from a congenital heart defect repair. The mother's chief complaint is the fever, not the color, pulse oximetry, or the respiratory distress. This may be because these aspects of his assessment are normal. The intact mental status is also a sign that he has adapted to lower oxygen saturation's. The child's baseline must come from the caregiver before any intervention.

3. An 11-year-old presents to the emergency department with a complaint of hitting his head while playing soccer. The nurse enters the room and performs an across-the-room assessment. He is staring at the wall. He has no increased work of breathing, and his color is pink. Using the pediatric assessment triangle (PAT), what classification will the nurse assign?

Tobacco and Health K. Slama, 2012-12-06 Over 1 100 delegates from a hundred countries attended the 9th World Conference on Tobacco and Health. After five days of debate, several important resolutions were adopted unanimously and will be landmarks in the fight against tobacco. This great success is due to three facts which emerged from the discussions: 1. It appears clearly now that the risks associated with tobacco are much greater than previously assumed. Out of two regular smokers, one will die from a tobacco-related disease. 2. Reducing tobacco consumption can be achieved, but the data collected in several countries show that it requires a global strategy. This strategy was much debated during the conference. The resolutions adopted emphasize the agreement of the delegates on the main points: Action to fight the growing epidemic of tobacco attributable disease and death involves convincing the general public, the medical community, and decision makers of the need to act for tobacco control. The most efficient tools for helping individuals never to start or successfully to stop using tobacco should be developed. Effective tobacco control endeavors are required to counteract the actions of the powerful and influential tobacco manufacturers. With the help and under the aegis of WHO, DICC, IUATLD, ISFC, IOCD, and IUHPE, an international alliance for health and against tobacco should unite all those who are engaged in this fight.

accessible Structural Concrete Textbook, Volume 5 fib Fédération internationale du béton, 2012-06-01 The third edition of the Structural Concrete Textbook is an extensive revision that reflects advances in knowledge and technology over the past decade. It was prepared in the intermediate period from the CEP FIP Model Code 1990 MC90 to fib Model Code for Concrete Structures 2010 MC2010 and as such incorporates a significant amount of information that has been already finalized for MC2010 while keeping some material from MC90 that was not yet modified considerably. The objective of the textbook is to give detailed information on a wide range of concrete engineering from selection of appropriate structural system and also materials through design and execution and finally behaviour in use. The revised fib Structural Concrete Textbook covers the following main topics: phases of design process, conceptual design, short and long term properties of conventional concrete including creep, shrinkage, fatigue and temperature influences, special types of concretes such as self-compacting concrete, architectural concrete, fibre-reinforced concrete, high and ultra-high performance concrete, properties of reinforcing and prestressing materials, bond, tension stiffening, moment-curvature, confining effect, dowel action, aggregate interlock, structural analysis with or without time-dependent effects, definition of limit states, control of cracking and deformations, design for moment, shear or torsion, buckling, fatigue, anchorages, splices, detailing, design for durability including service life, design aspects, deterioration mechanisms, modelling of deterioration mechanisms, environmental influences, influences of design and execution on durability, fire design including changes in material and structural properties, spalling, degree of deterioration, member design, linear members and slabs with reinforcement layout, deep beams, management, assessment, maintenance, repair including conservation strategies, risk management, types of interventions as well as aspects of execution, quality assurance, formwork and curing. The updated textbook provides the basics of material and structural behaviour and the fundamental knowledge needed for the design, assessment or retrofitting of concrete structures. It will be essential reading material for graduate students in the field of structural concrete and also assist designers and consultants in understanding the background to the rules they apply in their practice. Furthermore, it should prove particularly valuable to users of the new editions of Eurocode 2 for concrete buildings, bridges and container structures which are based only partly on MC90 and partly on more recent knowledge which was not included in the 1999 edition of the textbook. **Election Day** Emilee Booth Chapman, 2024-08-20

An original defense of the unique value of voting in a democracy. Voting is only one of the many ways that citizens can participate in public decision making, so why does it occupy such a central place in the democratic imagination? In *Election Day*, political theorist Emilee Booth Chapman provides an original answer to that question, showing precisely what is so special about how we vote in today's democracies. By presenting a holistic account of popular voting practices and where they fit into complex democratic systems, she defends popular attitudes toward voting against radical critics and offers much needed guidance for voting reform. Elections embody a distinctive constellation of democratic values and perform essential functions in democratic communities. *Election Day* dramatizes the nature of democracy as a collective

and individual undertaking makes equal citizenship and individual dignity concrete and transparent and socializes citizens into their roles as equal political agents Chapman shows that fully realizing these ends depends not only on the widespread opportunity to vote but also on consistently high levels of actual turnout and that citizens experiences of voting matters as much as the formal properties of a voting system And these insights are also essential for crafting and evaluating electoral reform proposals By rethinking what citizens experience when they go to the polls Election Day recovers the full value of democratic voting today

Convergence-Confinement Method for Tunnel Design Marc Panet,Jean Sulem,2022-01-24 This book presents the theoretical bases and the application tools for using the convergence confinement method which is a rational method largely used in design engineering for tunneling Until recently the stability conditions of underground works and the choice of support methods were essentially defined on the basis of good practice or empirical methods The progress made on one hand

on the knowledge of the constitutive laws of soils and rocks and on the other hand on the numerical modeling of the interaction between the ground and the structures have led to the development of robust design tools for tunnels supports. The convergence confinement method makes it possible to simulate the excavation of a tunnel and the installation of the support using a simple plane strain model. The book presents the theoretical bases of the method and its most recent developments. Closed form solutions for stress and displacement fields around tunnels are provided for elastic viscoelastic and elasto plastic behavior of the ground. More generally the principles for applying the method in numerical models are presented.
