Epistemology and the Social, 2015-06-29 Epistemology had to come to terms with the social on two different occasions The first was represented by the dispute about the epistemological status of the social sciences and in this case the already well established epistemology of the natural sciences seemed to have the right to dictate the conditions for a discipline to be a science But the social sciences could successfully vindicate the legitimacy of their specific criteria for scientificity More recently the impact of social factors on the construction of our knowledge including scientific knowledge has reversed in a certain sense the old position and promoted social inquiry to the role of a criterion for evaluating the purport of cognitive including scientific statements But this has undermined the traditional characteristics of objectivity and rigor that seem constitutive of science Moreover in order to establish the real extent to which social conditionings have an impact on scientific knowledge one must credit sociology with a sound ground of reliability and this is not possible without a preliminary epistemological assessment These are some of the topics discussed in this book both theoretically and with reference to concrete cases
