Climate Change, Disaster and Adaptations Azizur Rahman Siddiqui,Avijit Sahay,2022-02-26 This volume examines how local communities respond and adapt to ecological changes and disasters resulting from climate change The main aim of the book is to understand the range of human responses to ecological change and to contextualise the reasons for adopting any particular adaptive strategy by a community Through the help of specific case studies presented as individual chapters the book aims to find out whether adaptation due to environmental stress is an individual decision and therefore is an isolated phenomenon or if resilience and adaptation are part of the same action paradigm of society as a whole in response to environmental change Of particular interest are the case studies of climate change or disasters that have rendered the site unsuitable for the return of its community at present and thus necessitated the relocation of such communities to new locations The case studies in the book focus on regions in India but cover different parts of the world as well and address concepts of resilience vulnerability risk adaptation and mitigation The book will be useful for students and researchers in the fields of geography disaster management environmental science and anthropology

Remote Sensing Change Analysis Methodology to Support Traffic Monitoring Programs Reginald R. Souleyrette,2004 The Center for Transportation Research and Education CTRE issued a report in July 2003 based on a sample study of the application of remote sensed image land use change detection to the methodology of traffic monitoring in Blackhawk County Iowa In summary the results indicated a strong correlation and a statistically significant regression coefficient between the identification of built up land use change areas from remote sensed data and corresponding changes in traffic patterns expressed as vehicle miles traveled VMT Based on these results the Iowa Department of Transportation Iowa DOT requested that CTRE expand the study area to five counties in the southwest quadrant of the state These counties are scheduled for traffic counts in 2004 and the Iowa DOT desired the data to 1 evaluate the current methodology used to place the devices 2 potentially influence the placement of traffic counting devices in areas of high built up land use change and 3 determine if opportunities exist to reduce the frequency and or density of monitoring activity in lower trafficked rural areas of the state This project is focused on the practical application of built up land use change data for placement of traffic count data recording devices in five southwest Iowa counties
