The Handbook of Key Global Financial Markets, Institutions and Infrastructure begins its description of how we created a financially integrated world by first examining the history of financial globalization from Roman practices and Ottoman finance to Chinese standards, the beginnings of corporate practices, and the advent of efforts to safeguard financial stability. It then describes the architecture itself by analyzing its parts such as markets, institutions, and infrastructure. The contributions of sovereign funds, auditing, regulation, loan markets, property rights, compensation practices, Islamic finance, and others to the global architecture are closely examined. For those seeking substantial authoritative descriptions and summaries, this volume will replace books, journals, and other information sources with a single easy to use reference work. Substantial articles by top scholars set this volume apart from other information sources. Diverse international perspectives result in new opportunities for analysis and research. Carayannis, Ali Pirzadeh, Denisa Popescu, 2011-11-25 Over the past several decades as the pace of globalization has accelerated operational issues of international coordination have often been overlooked For example the global financial crisis that began in 2007 is attributed in part to a lack of regulatory oversight As a result supranational organizations such as the G 20 the World Bank and the International Monetary Fund have prioritized strengthening of the international financial architecture and providing opportunities for dialogue on national policies international co operation and international financial institutions Prevailing characteristics of the global economic systems such as the increasing power of financial institutions changes in the structure of global production decline in the authority of nation states over their national economy and creation of global institutional setting e g global governance have created the conditions for a naturally evolving process towards enabling national epistemic communities to create institutions that comply with global rules and regulations can control crises In this context transfer of technical knowledge from the larger organizations and its global epistemic communities to member communities is becoming a policy tool to convince participants in the international system to have similar ideas about which rules will govern their mutual participation In the realm of finance and banking regulation the primary focus is on transfer of

specialized and procedural knowledge in technical domains such as accounting procedures payment systems and corporate governance principles thereby promoting institutional learning at national and local levels In this volume the authors provide in depth analysis of initiatives to demonstrate how this type of knowledge generated at the international organization level is codified into global standards and disseminated to members particularly in the developing world where the legal and regulatory infrastructure is often lacking They argue that despite the challenges when a country intends to join the global system its institutions and economic structures need to move toward the global norms In so doing they shed new light on the dynamics of knowledge transfer financial regulation economic development with particular respect to supporting global standards and avoiding future crises
