Consider the Platypus Maggie Ryan Sandford, 2019-08-27 FINALIST FOR THE 2020 GENERAL NONFICTION MINNESOTA BOOK AWARDS Interested in the origins of the species *Consider the Platypus* uses pets such as dogs and cats as well as animal outliers like the axolotl and naked mole rat to wittily tackle mind bending concepts about how evolution biology and genetics work *Consider the Platypus* explores the history and features of more than 50 animals to provide insight into our current understanding of evolution

Using Darwin's theory as a springboard Maggie Ryan Sandford details scientists' initial understanding of the development of creatures and how that has expanded in the wake of genetic sequencing including the Peppered Moth which changed color based on the amount of soot in the London air California Two Spotted Octopus which has the amazing ability to alter its DNA RNA not over generations but during its lifetime miniscule tardigrade which is so hearty it can withstand radiation lack of water and oxygen and temperatures as low as 328 F and as high 304 F and of course the platypus which has so many disparate features from a duck's bill to venomous spur to mammary patches that scientists originally thought it was a hoax Surprising witty and impeccably researched Sandford describes each animal's significant features and how these have adapted to its environment such as the zebra finch's beak shape which was observed by Charles Darwin and is a cornerstone of his Theory of Evolution With scientifically accurate but charming art by Rodica Prato Consider the Platypus showcases species as diverse as the sloth honey bee cow brown kiwi and lungfish to name a few to tackle intimidating concepts in an accessible way
