

Geometry Study Guide

Terms	Definition
Right angle	An angle that measures exactly 90 degrees.
Obtuse angle	An angle that is larger than 90 degrees, yet less than 180 degrees.
Acute angle	An angle that measures less than 90 degrees.
Straight angle	An angle that measures exactly 180 degrees.
Polygon	Any enclosed figure that is bounded by straight line segments.
Triangle	Any three-sided polygon.
Quadrilateral	Any four-sided polygon such as a square, rectangle, trapezoid, etc.
Pentagon	Any five-sided polygon.
Hexagon	Any six-sided polygon.
Octagon	Any eight-sided polygon.
Regular polygon	A polygon that has the same length sides and equal angles. An example of this would be a square.
Parallel	Two lines that will never cross.
Congruent	Two figures that are the same size and shape.
180 degrees	The total degree measurement of all angles of any triangle.
360 degrees	The total degree measurement of all angles of any four-sided polygon.
Triangulate	To make as many triangles out of a polygon.

Be able to:

- Determine the missing angle of a triangle when given two of the angles. An example of this would be if two angles of a triangle measured 33 and 60 degrees, what would the third angle measure? To answer this, you must understand that the sum of three angles of a triangle (no matter what size or shape) equals 180 degrees. So to answer the question, add 33 degrees + 60 degrees = 93 degrees. Then take 180 degrees and subtract 93 degrees to get the answer of the third angle, which would be 87 degrees.
- Be able to do the same with a quadrilateral as you did with the triangle.
- Be able to triangulate a polygon. An example of this would be: 
- Be able to determine the total amount of degrees of a polygon after triangulating it. Example is the previous polygon, would be 2 triangles since 180 degrees equals 360 degrees.
- Be able to draw rectangle ABCD. Make side AB = 2 cm. Make side BC = 3 cm. Remember to label your polygon. Do you think anyone will draw the same rectangle? Why or why not?
- Be able to measure and draw angles.
- We will also review adding and subtracting fractions such as $\frac{1}{2} + \frac{1}{3}$.
