to new research and methodologies These transformative interventions Morawski argues have often consisted of local and partial alterations to established methods rather than a programmatic metatheory or a formulaic methodology She reviews a variety of exemplary studies that demonstrate how such intermittent practices taken together constitute a groundword for radically new forms of psychological inquiry The study describes feminist challenges to long held conceptions of objectivity subjectivity and validity and examines emergent problems and ongoing debates The feminist innovations discussed reveal the impossibility of a pure and abstract objective stance and demonstrate the feasibility of situated and critical objective practices Morawski also shows how experimental investigative strategies are generating new perspectives on subjectivity which incorporate agency as well as dependence reflection as well as reactivity Feminist inquiry is modifying the procedures through which knowledge is warranted with different evaluations of validation processes Despite the transformations in these areas the pursuit of a feminist psychology remains in transition in a liminal space Among the emerging issues Morawski explores are vicissitudes of reflexivity the investigator s self and the cultural bases of psychological knowledge

Farenga, 2007-03-26 Knowledge under Construction investigates how young children develop spatial geometric and scientific thinking skills particularly those associated with architecture Based on original research and analysis of videotapes of children s play with blocks the authors findings suggest that such play is anything but pointless Their conclusions fill in gaps in our current understanding of how children learn to think spatially and scientifically even while challenging portions of that understanding including some of Piaget s thesis about the primacy of topological space in children s learning A system of measurement developed to identify and categorize children s spontaneous behavior at play allows adults to observe patterns of behavior as children play and record the development of process skills and cognitive abilities enhancing our understanding of how children begin to learn about space and architectural relationships The book also examines the educational implications of our enhanced understanding One possible development is a new alternative way to measure cognitive abilities and development in children based on their work with blocks
