Genetics and genomics of plant reproduction for crop breeding, volume II Gianni Barcaccia, Fulvio Pupilli, Sara Zenoni, Emidio Albertini, Andrea Mazzucato, Silvia Vieira Coimbra, Luciana Baldoni, Soraya Mousavi, 2023-03-20

Advances in Ascochyta Research Diego Rubiales, Sara Fondevilla, Weidong Chen, Jennifer Davidson, 2018-12-21 Legume crops provide an excellent source of high quality plant protein and have a key role in arable

crop rotations reducing the need for fertilizer application and acting as break crops. However, these crops are affected by a number of foliar and root diseases, with ascochyta blights being the most important group of diseases worldwide. Ascochyta blights are incited by different pathogens in the various legumes. A number of control strategies have been developed, including resistance breeding, cultural practices, and chemical control. However, only marginal successes have been achieved in most instances, most control methods being uneconomical, hard to achieve, or resulting in incomplete protection. This eBook covers recent advances in cooperative research on these diseases from agronomy to breeding, covering traditional and modern genomic methodologies.

The Pine Genomes Amanda R. De La Torre, 2022-02-27 This book is the first comprehensive compilation of the most up to date research in the genomics, transcriptomics, and breeding of pine species across Europe, North America, and Australia. With chapters on the state of the reference genomes, transposon function, genome-wide diversity, functional genomics, genomics of disease resistance, genomics of abiotic stress, and genomic selection, this book is a must-read for scientists, breeders, and students of plant genomics. The book contains 12 chapters over 300 pages, authored by a group of world-renowned scientists in the field of pine genomics. Pines (*Pinus*) are the world's most economically important forest tree species. The recent genome sequencing of several important pine species has paved the way for understanding their complex biology and helps future management and breeding efforts.

A Genetic Linkage Map of Vitis Rupestris X Muscadinia Rotundifolia Michael E. Doucett, 2002

Genomic Selection in Plants Ani A. Elias, Shailendra Goel, 2022-08-18 Genomic selection (GS) is a promising tool in the field of breeding, especially in the era where genomic data is becoming cheaper. The potential of this tool has not been realized due to its limited adaptation in various crops. Marker-Assisted Selection (MAS) has been the method of choice for plant breeders while using the genomic information in the breeding pipeline. MAS, however, fails to capture vital minor gene effects while focusing only on the major genes, which is not ideal for breeding advancement, especially for quantitative traits such as yield. The main aim of statistical methodologies coming under the umbrella of GS on using the whole genome information is to predict potential candidates for breeding advancement while optimizing the use of resources such as land, manpower, and most importantly, time. Lack of proper understanding of the methods and their applications is one of the reasons why breeders shy away from this tool. The book is meant for biologists, especially breeders, and provides a comprehensive idea of the statistical methodologies used in GS, guidance on the choice of models and design of datasets. The book also encourages the readers to adopt GS by demonstrating the current scenarios of these models in some of the important crops, among oilseeds, vegetables, legumes, tuber crops, and cereals. For ease of implementation of GS, the book also provides hands-on scripts on GS data design and modeling in a popular open-source statistical program. Additionally, prospective in GS model development and thereby enhancement in crop improvement programs is discussed.

The Zebrafish in Biomedical Research Samuel Cartner, Judith S. Eisen, Susan F. Farmer, Karen J. Guillemin, Michael L. Kent, George E. Sanders, 2019-11-22 *The Zebrafish in Biomedical Research: Biology, Husbandry, Diseases, and Research*

Applications is a comprehensive work that fulfills a critical need for a thorough compilation of information on this species.
