Item number (in the range 1 to 1000),

Number sold,

Number delivered to the branch.

(Nil returns on items are not required.)

The information is punched onto cards, together with another field giving the branch number (in the range 1 to 5). All cards are batched with a last card containing a branch number 0.

The stock levels for each branch are held in a (5×1000) array called STOCK and there is a corresponding array, REORDER, containing the stock level at which a branch should re-order an item.

Draw a flowchart to read the data, update the array STOCK and print the branch number and item number for those items requiring re-ordering. (6)

(b) Another company, having 500 branches, wants to use this system and decides that the arrays will have to be held on magnetic tape.

Explain how you would organise the two arrays and draw a flowchart to show how you would carry out the processing in this case. (14)
