CAR-T Cell Therapies for Non-Hematopoietic Malignancies: Taking Off The Training Wheels Avery Dexter Posey, Jr., John - Maher, Marcela V. Maus, 2020-04-24 Chimeric antigen receptor CAR T cell therapies for leukemia e g tisagenlecleucel and lymphoma e g axicabtagene ciloleucel have recently received regulatory approval in the United States Phase I II trials have demonstrated complete remission of refractory or relapsed tumors in 50% 94% patients However the clinical successes of engineered T cells for the treatment of solid malignancies have thus far been few and far between Furthermore several instances of severe and lethal toxicities have arisen due to on target off tumor recognition of antigen by

T cell products Recent advances in phase I trials for solid tumors as well as in pre clinical models have revealed several variables that will be important to consider for the successful use of CAR T cells in treating solid tumors These variables include i regional versus systemic delivery ii scFv versus ligand interactions iii antigen loss versus escape iv epitope spreading and v checkpoint expression on immune cells or tumor cells Also there remains outstanding mechanistic questions related to why differences exist in the persistence and tonic signaling of second generation CD28 versus 4 1BB co stimulated CAR T cells In addition we are now learning the roles of lympho depleting regimens and associated toxicities in modifying the persistence of engineered T cell therapies A more comprehensive view of CAR T cell strategies and important advances both of pre clinical and clinical evaluations in solid tumors is necessary to drive these therapies forward
