Maintenance of the slip ring assembly of the cable drum

M 6

Maintenance of the slip ring assembly is carried out in order to prevent contamination and corrosion and to prevent malfunctions on the SLI. The GMK truck cranes have two cable drums whose slip ring assemblies must be serviced.

There is a cable drum (1) on the left side of the main boom.

Risk of crushing when extending or retracting boom

Secure the boom against unintentional movement, so that your fingers will not be crushed by retracting telescopic sections or by the turning slip ring assembly. If you are carrying out this operation with the help of someone else, communicate with the person in the crane cab by means of clear hand signals.

The second cable drum (1) is located in the main boom underneath the telescoping cylinder.

You can reach the cable drum through the manhole if you first extend telescopic section I by approx. 2 m (ca. 6.6 ft).
