Neo-Piagetian Theories of Cognitive Development Andreas Demetriou, Michael Shayer, Anastasia Efklides, 2016-07-07 Piagetian theory was once considered able to describe the structure and development of human thought As a result it generated an enthusiasm that it could direct education to develop new teaching methods particularly in science and mathematics However disillusionment with Piagetian theory came rather quickly because many of its structural and developmental assumptions appeared incongruent with empirical evidence In recent years several neo Piagetian theories have been proposed which try to preserve the strengths of Piaget s theory while eliminating its weaknesses At the same time several other models have been advanced originating from different

epistemological traditions such as cognitive differential psychology or socio historical approaches Originally published in 1992 this title was unique in representing most of these theories and traditions Specifically the authors focus their work on the educational implications of their research The chapters are organised in three parts the first part presents some widely known models of cognitive development and discusses their implications for different aspects of education the second part is devoted to learning and cognitive acceleration while part three highlights teaching methods that would improve the acquisition of particular skills in specific areas Written by an eminent group of truly international contributors this title will still be useful to students and researchers in cognitive development and education as well as educational policy makers
