Reproductive Sciences in Animal Conservation Pierre Comizzoli, Janine L. Brown, William V. Holt, 2019-08-30 This second edition emphasizes the environmental impact on reproduction with updated chapters throughout as well as complete new chapters on species such as sharks and rays This is a wide ranging book that will be of relevance to anyone involved in species conservation and provides critical perspectives on the real utility of current and emerging reproductive sciences Understanding reproductive biology is centrally important to the way many of the world's conservation problems should be tackled Currently the extinction problem is huge with up to 30% of the world's fauna being expected to disappear in the next 50 years Nevertheless it has been estimated that the global population of animals in zoos encompasses 12 000 15 000 species and we anticipate that every effort will be made to preserve these species for as long as possible minimizing inbreeding effects and providing the best welfare standards available Even if the reproductive biology community cannot solve the global biodiversity crisis for all wild species we should do our best to maintain important captive populations Reproductive biology in this context is much more than the development of techniques for helping with too little or too much breeding While some of the relevant techniques are useful for individual species that society might target for a variety of reasons whether nationalistic cultural or practical technical developments have to be backed up by thorough biological understanding of the background behind the problems Too Hot to Touch William M. Alley, Rosemarie Alley, 2013 A fascinating and authoritative account of the controversies and possibilities surrounding nuclear waste disposal providing expert discussion in down to earth language *Excellence in Public Relations and Communication Management* James E. Grunig, 2013-10-18 This book is the initial volume coming out of the excellence project a comprehensive research effort commissioned by the IABC International Association of Business Communicators Research Foundation The purpose of this project was to answer two fundamental questions about public relations What are the characteristics of an excellent communication department How does excellent public relations make an organization more effective and how much is that contribution worth economically The research team began its work with a thorough review of the literature in public relations and related disciplines relevant to these questions What started as a literature review however has ended in a general theory of public relations one that integrates most of the wide range of ideas about and practices of communication management in organizations **Zero Waste Management Technologies** Rouf Ahmad Bhat, Gowhar Hamid Dar, Younis Ahmad Hajam, 2024-06-29 This volume highlights cutting edge research on Zero waste management and the associated effects of waste on the environment Predominantly it focuses on the challenges of dealing with the amassed production of waste and the cumulative impact of increasing waste on the biosphere Different sections of this book focus on the comprehensive overview of the technological advancements driving the Zero Waste movement Furthermore it explores innovations in waste reduction recycling and repurposing from a global perspective examining the diverse cultural social and economic factors

influencing the adoption of zero waste strategies worldwide In addition it discusses the challenges and opportunities inherent in promoting a unified global effort toward sustainable resource management Discover the latest breakthroughs in waste reduction recycling and resource optimization This essential guide empowers you to implement practical innovative solutions for a greener future Whether a business owner environmental enthusiast or simply curious about sustainable living this book is a roadmap to a cleaner and healthier planet *Handbook of Fish Biology and Fisheries* Paul J. B. Hart, John D.

Reynolds, 2008-04-15 Recent decades have witnessed strong declines in fish stocks around the globe amid growing concerns about the impact of fisheries on marine and freshwater biodiversity Fisheries biologists and managers are therefore increasingly asking about aspects of ecology behaviour evolution and biodiversity that were traditionally studied by people working in very separate fields This has highlighted the need to work more closely together in order to help ensure future success both in management and conservation The Handbook of Fish Biology and Fisheries has been written by an international team of scientists and practitioners to provide an overview of the biology of freshwater and marine fish species together with the science that supports fisheries management and conservation This volume subtitled Fish Biology reviews a broad variety of topics from evolutionary relationships and global biogeography to physiology recruitment life histories genetics foraging behaviour reproductive behaviour and community ecology The second volume subtitled Fisheries uses much of this information in a wide ranging review of fisheries biology including methods of capture marketing economics stock assessment forecasting ecosystem impacts and conservation Together these books present the state of the art in our understanding of fish biology and fisheries and will serve as valuable references for undergraduates and graduates looking for a comprehensive source on a wide variety of topics in fisheries science They will also be useful to researchers who need up to date reviews of topics that impinge on their fields and decision makers who need to appreciate the scientific background for management and conservation of aquatic ecosystems To order volume I go to the box in the top right hand corner

Microbial Biodegradation and Bioremediation Surajit Das, Hirak Ranjan Dash, 2021-11-24 Microbial Biodegradation and Bioremediation Techniques and Case Studies for Environmental Pollution Second Edition describes the successful application of microbes and their derivatives for bioremediation of potentially toxic and relatively novel compounds in the environment Our natural biodiversity and environment is in danger due to the release of continuously emerging potential pollutants by

anthropogenic activities Though many attempts have been made to eradicate and remediate these noxious elements thousands of xenobiotics of relatively new entities emerge every day thus worsening the situation Primitive microorganisms are highly adaptable to toxic environments and can reduce the load of toxic elements by their successful transformation and remediation This completely updated new edition presents many new technologies and techniques and includes theoretical context and case studies in every chapter Microbial Biodegradation and Bioremediation Techniques and Case Studies for Environmental Pollution Second Edition serves as a single source reference and encompasses all categories of pollutants and their applications in a convenient comprehensive format for researchers in environmental science and engineering pollution environmental microbiology and biotechnology Describes many novel approaches of microbial bioremediation including genetic engineering metagenomics microbial fuel cell technology biosurfactants and biofilm based bioremediation Introduces relatively new hazardous elements and their bioremediation practices including oil spills military waste water greenhouse gases polythene wastes and more Provides the most advanced techniques in the field of bioremediation including insilico approach microbes as pollution indicators use of bioreactors techniques of pollution monitoring and more Completely updated and expanded to include topics and techniques such as genetically engineered bacteria environmental health nanoremediation heavy metals contaminant transport and in situ and ex situ methods Includes theoretical context and case studies within each chapter

Theory and Practices on Innovating for Sustainable Development Yoram

Krozer, 2015-08-26 This book explains how income growth and better environmental qualities go hand in hand and reviews the drivers and barriers to sustainable innovation on the basis of real life cases It discusses why innovation based income growth reduces environmental impacts and how the huge global markets for sustainable innovation are currently hampered by protectionist policies Subsequently diverse sustainable innovators are presented in ascending order of the complexity of interactions between innovators and stakeholders In this context innovating consumers who create communities of peers in solar powered mobility are examined in the first case It also focuses on regional tacit inventors who spur innovation in tourism mobility thanks to the informal policies but whose efforts are obstructed by the formalities of the European Union Artists with an interest in both innovations and the environment develop art services that deliver experiences of environmental qualities Though these experiences have gone unrecognised so far they are nonetheless socially beneficial The book also shows how technology suppliers develop four different patterns of sanitation each with its own pros and cons for the specific community s needs and conditions It discusses how project developers also make innovations in office systems including socially beneficial ones that do away with the need to commute It includes an analysis of interactions between consumers pursuing ethical consumption and international trailblazers in corporate responsibility and concludes that it is more rewarding to support social entrepreneurs than to attempt to moralise consumers Further analysis of interactions between sustainable investors and innovators reveals different groups opinions about policies and markets helping to

explains their weak influence on policies Mushrooming local energy initiatives are now evolving into energy service companies producing shifts on energy markets Why these innovators emerge and how certain policies are blocking them are explained The policies of the United States and European Union are compared with regard to the main barriers to and drivers of the renewable energy business Though the US invests more money and takes more risks it is less cost effective in terms of the number of enterprises and jobs thanks to the feed in tariffs in Europe Lastly the book also discusses policies that invest in education skills knowledge and know how exchange but instead abolish perverse subventions of vested interests to create conditions for sustainable development

Uncertainty in Climate Change Research Linda O. Mearns,Chris E. Forest,Hayley J. Fowler,Robert Lempert,Robert L. Wilby,2025-07-14 This edited volume with open access discusses all aspects of uncertainty in climate change research with a unique emphasis on decision making under uncertainty and the assessment of various uncertainties in the landscape of decision making By analyzing uncertainty through the lens of decision making the book seeks to understand and assess the various uncertainties inherent in climate change research including uncertainties in economic impacts human health and vulnerability fluctuations in the physical climate system changes in infrastructure and future climate projections Very little published material exists on the uncertainties regarding vulnerability of different populations to climate change and so the book characterizes the uncertainty in vulnerability to better formulate solutions to climate change problems in affected populations The volume will be of interest to students post docs early career scientists and researchers interested in all aspects of climate change After an introduction that addresses the issue of uncertainty in general as it pertains to climate change research the book is divided into 5 main sections Section 1 focuses on uncertainty in policy and decision making and how climate related policy choices impact risk management impact mitigation and adaptation Section 2 discusses uncertainty in climate change impacts including impacts in agriculture water resources transportation infrastructure and human health and vulnerability Section 3 analyzes physical climate uncertainties such as Earth system projections emissions concentrations and sea level rise projections Section 4 details the methods for quantifying uncertainty from a statistical perspective Section 5 concludes the volume with discussions on special topics and integrated themes on uncertainty including ethics and uncertainty communication the economics of climate change and integrated modeling for decision support
