Polynomials and the mod 2 Steenrod Algebra: Volume 2, Representations of $GL(n, F_2)$ Grant Walker, Reginald M. W. Wood, 2017-11-09 This is the first book to link the mod 2 Steenrod algebra a classical object of study in algebraic topology with modular representations of matrix groups over the field F of two elements The link is provided through a detailed study of Peterson's hit problem concerning the action of the Steenrod algebra on polynomials which remains unsolved except in special cases The topics range from decompositions of integers as sums of powers of 2 minus 1 to Hopf algebras and the Steinberg representation of $GL(n, F)$ Volume 1 develops the structure of the Steenrod algebra from an algebraic viewpoint and can be used as a graduate level textbook Volume 2 broadens the discussion to include modular representations of matrix groups

Automorphic Forms and Galois Representations: Volume 2 Fred Diamond, Payman L. Kassaei, Minhyong Kim, 2014-10-16 Automorphic forms and Galois representations have played a central role in the development of modern number theory with the former coming to prominence via the celebrated Langlands program and Wiles proof of Fermat's Last Theorem This two volume collection arose from the 94th LMS EPSRC Durham Symposium on Automorphic Forms and Galois Representations in July 2011 the aim of which was to explore recent developments in this area The expository articles and research papers across the two volumes reflect recent interest in p -adic methods in number theory and representation theory as well as recent progress on topics from anabelian geometry to p -adic Hodge theory and the Langlands program The topics covered in volume two include curves and vector bundles in p -adic Hodge theory associators Shimura varieties the birational section conjecture and other topics of contemporary interest

The Block Theory of Finite Group Algebras: Volume 2 Markus Linckelmann, 2018-05-24 This is a comprehensive introduction to the modular representation theory of finite groups with an emphasis on block theory The two volumes take into account classical results and concepts as well as some of the modern developments in the area Volume 1 introduces the broader context starting with general properties of finite group algebras over commutative rings moving on to some basics in character theory and the structure theory of algebras over complete discrete valuation rings In Volume 2 blocks of finite group algebras over complete p -local rings take centre stage and many key results which have not appeared in a book before are treated in detail In order to illustrate the wide range of techniques in block theory the book concludes with chapters classifying the source algebras of blocks with cyclic and Klein four defect groups and relating these classifications to the open conjectures that drive block theory
