systems science embraces a broad spectrum of topics It is virtually impossible to provide comprehensive and in depth discussion other than simple recitals of recent results of every important topic in each volume of this annual review series

Since we have chosen the former approach each volume will only cover certain aspects of recent advances in this burgeoning field The emphasis in this volume the third of a continuing series is focussed upon pattern recognition pictorial

information manipulation and new approaches to logical design of information networks In Chapter 1 V A Kovalevsky

presents a tutorial survey of practical and theoretical developments in pattern recognition He categorizes the basic

developments in three different directions The first direction is characterized by an empirical treatment with highly

specialized recognition schemes In the second direction the major efforts are centered upon the creation of learning systems

capable of improving recognition performance on the basis of past experience The majority of the work in the third direction

is devoted to the study of the basic structure of complex patterns the construction of mathematical models for pattern

recognition and the analysis of complex pictorial representations The author elucidates the heuristics approach and the

science approach to pattern recognition problems This chapter together with Chapter 2 of this volume supplements the

American Environmentalism J. Michael Martinez, 2013-06-20 Protecting the natural environment and promoting sustainability have become important objectives but achieving such goals presents myriad challenges for even the most

committed environmentalist American Environmentalism Philosophy History and Public Policy examines whether competing interests can be reconciled while developing consistent coherent effective public policy to regulate uses and protection of the

natural environment without destroying the national economy It then reviews a range of possible solutions The book delves

into key normative concepts that undergird American perspectives on nature by providing an overview of philosophical

concepts found in the western intellectual tradition the presuppositions inherent in neoclassical economics and

anthropocentric human centered and biocentric earth centered positions on sustainability It traces the evolution of attitudes about nature from the time of the Ancient Greeks through Europeans in the Middle Ages and the Renaissance the Enlightenment and the American Founders the nineteenth and twentieth centuries and up to the present Building on this foundation the author examines the political landscape as non governmental organizations NGOs industry leaders and government officials struggle to balance industrial development with environmental concerns Outrageous claims silly misrepresentations bogus arguments absurd contentions and overblown prophesies of impending calamities are bandied about by many parties on all sides of the debate industry spokespeople elected representatives unelected regulators concerned citizens and environmental NGOs alike In lieu of descending into this morass the author circumvents the silliness to explore the crucial issues through a more focused disciplined approach Rather than engage in acrimonious debate over minutiae as so often occurs in the context of green claims he recasts the issue in a way that provides a cohesive look at all sides This effort may be quixotic but how else to cut the Gordian knot
