Fair Assessment Warren W. Willingham, Nancy S. Cole, 2013-12-16 There have been many important changes in the
participation of women and men in American society over the past quarter century Tests play a role in those changes by
providing evidence of the diverse achievement and proficiency of women and men They aid the learning process and reflect
inequalities in opportunity to learn and participate In addition they provide useful information in considering what
alternatives in education and work make most sense for individuals and influence views about groups of students educational
programs and a wide range of issues For all of these reasons it is important that tests assess fairly and reflect accurately the
ways young people are and are not achieving as well as desired The test performance of women and men is a research topic
of historical interest and has received much attention in recent years Because of this increased interest there is a great deal
of new research and data available The purpose of the study presented in this volume was to review this new information
with two objectives in mind to clarify patterns of gender difference and similarity in test performance and related
achievements and to see what implications those findings might have for fair assessment and as a corollary examine the
assessment process as a possible source of gender differences This study is interested in tests used in education to assess
developed knowledge and skill In order to gain a broader view of gender similarity and difference the contributors looked at
other types of measures and other characteristics of young women and men Their hope is to contribute to a firmer basis for
insuring fairness in tests an objective which is particularly important as the field moves increasingly to new forms of
assessment in which there is less experience **Curriculum Development Library** ,1980 *Boletín Internacional de*
