engage with In Manufacturing the Mathematical Child Anna Llewellyn asks some difficult questions in order to determine why this is the case and to question who it is that we allow to succeed at mathematics particularly within the context of neoliberalism where education is a product of the market By looking at the various sites of production Llewellyn examines the ways that key discursive spaces produce very different expectations of what it means to do mathematics and demonstrates that these place various homogenised expectations upon children Arguing that these are not natural but instead a reproduction of discursive norms the book demonstrates why some people fit these standardized ways of being and others do not Using England as a case study and referring to other international contexts Llewellyn argues that there is a functionality found within certain educational policy discourses and a romantic attachment to the natural child found within educational research neither of which can match what happens in the messy classroom As a result it becomes evident that exclusion from mathematics is inevitable for many children Original and exciting this book will be of great interest to academics researchers and postgraduate students within the fields of mathematics education childhood studies policy studies and Foucauldian or post structural analysis
