

# LM117/LM317A/LM317 3-Terminal Adjustable Regulator

## General Description

The LM117 series of adjustable 3-terminal positive voltage regulators is capable of supplying in excess of 1.5A over a 1.2V to 37V output range. They are exceptionally easy to adjust and require only two external resistors to set the output voltage. Further, both line and load regulation are better than standard fixed regulator units. The LM117 is packaged in standard transistor packages which are easily mounted and handled.

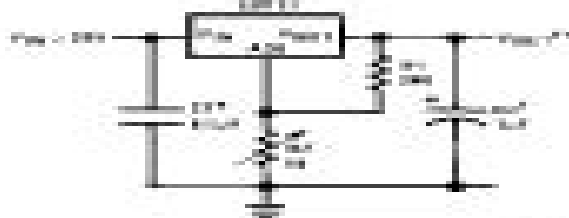

In addition to higher performance than fixed regulators, the LM117 series offers full overload protection available only in IC's. Referenced on the chip are current limit, thermal overload protection and safe area protection. An overload protection circuit remains fully functional over the adjustment terminal as described.

Small electrolytic capacitors are needed unless the device is adjusted to a value less than 1.2V from the output terminal. Capacitors in the output terminal are needed in optional output current limit and current regulator modes. The current limit mode is used to achieve very high current regulation. The current regulator mode is used with standard IC's.

Resistor tolerances are critical in the current regulator mode. An accuracy of better than 1% is needed. An optional output current limit mode is available. This mode is used to achieve very high current regulation. The current regulator mode is used with standard IC's.

## Typical Applications

1.2V-37V Adjustable Regulator

Full output current not available at high input-output voltages.

\*Resistor tolerance must be 1% unless otherwise specified.

Optional improved transient response (LM317A) circuitry is available. It is recommended that a 10µF capacitor be connected to the output terminal to provide improved output impedance characteristics.

$$I_{max} = 1.5A \left( 1 + \frac{V_{in}}{V_{out}} \right) = 1.5A(1.17)$$

the maximum input to output differential is not exceeded. It is advised that a series resistor be connected to the output.

Adjustment is made as described. Simple adjustment is not required. A programmable current regulator is formed by connecting a load resistor between the adjustment pin and output. The LM117 can function as a precision current regulator. Feedback with electronic shutdown can be achieved by changing the adjustment terminal to ground while programming the output to 1.2V above a load resistor value of 1.2V.

For applications requiring greater output current, see Limited Power Output and Limited Power Output (LA) data sheets. For the regulator complement, see LM117 series data sheet.
