Weathering of Plastics George Wypych, 1999-12-31 In spite of extensive efforts material weathering testing still requires improvement This book presents findings and opinions of experts in material degradation testing The aim is to improve testing methods and procedures Materials are presented to show that photochemical degradation rate depends on a combination of environmental factors such as UV radiation temperature humidity rain stress and concentration of reactive pollutants The potential effect of each parameter of degradation on data gathered is discussed based on known results from a long experience in testing This book contains data obtained in laboratories of the largest manufacturers of UV stabilizers and chemical companies that manufacture durable materials The book gives details of testing procedures and choice of parameters of exposure which are crucial for obtaining laboratory results correlating with environmental performance of materials In addition to exposure conditions the book contains many suggestions on sample preparation and post exposure testing The effective use of these methods shortens testing time of materials and determines acceleration rate of testing The book also gives examples of complete well designed weathering experiments which may be used as patterns for selection of parameters and techniques for new studies The areas of research that still require more attention in future studies are clearly indicated Con bro!, Activities Manual Maria C.
