Key Features of Functions

Function Value	Domain/Range	Increasing/Decreasing	Y-intercept/Zeros/Roots
Given $g(x) = 3x + 7$ Solve for $g(4)$ Take the value inside parameters (the parenthesis) and plug in every time you see your variable $g(4) = 3(4) + 7$ $g(4) = 19$	Domain: values of X that the function can have Range: values of Y that the function can have	Increasing (Directly Proportional): as $y \uparrow$, then $x \uparrow$ as $y \downarrow$, then $x \downarrow$ Decreasing (Indirectly Proportional): as $y \downarrow$, then $x \uparrow$ as $y \uparrow$, then $x \downarrow$	Y-intercept: Where the function hits the y-axis. It should be in the form $(0, y)$ zero: Where the function hits the x-axis. It should be in the form $(x, 0)$

Symmetry and Even/Odd

Property	Testing Symmetry						
Symmetric to y-axis Even function Symmetric to origin Odd function Symmetric to x-axis Not a function	Use the following test. If you return the EXACT same equation, it has symmetry "with respect to" the test <table> <tr> <td>x-axis</td><td>Replace $y \rightarrow -y$</td></tr> <tr> <td>y-axis</td><td>Replace $x \rightarrow -x$</td></tr> <tr> <td>origin</td><td>Replace $y \rightarrow -y$ Replace $x \rightarrow -x$</td></tr> </table>	x -axis	Replace $y \rightarrow -y$	y -axis	Replace $x \rightarrow -x$	origin	Replace $y \rightarrow -y$ Replace $x \rightarrow -x$

Logarithmic Functions Precalculus Hs Mathematics Unit Lesson 1:

Teaching and Learning High School Mathematics Charlene E. Beckmann, Denisse R. Thompson, Rheta N.

Rubenstein, 2009-11-02 Too many high school students faced with mathematics in courses at the level of algebra and beyond find themselves struggling with abstract concepts and unwilling to pursue further study of mathematics When students curtail their course taking in mathematics they may be impacting their college and career options Thus high school mathematics teachers have the responsibility to help students recognize the value and importance of mathematics while also designing instruction that makes mathematics accessible to all students Ball and Bass 2000 as well as other mathematics educators have recognized that mathematics teachers not only need to know mathematics content and mathematics pedagogy i e teaching strategies but they also need to know how these ideas are integrated This mathematical knowledge for teaching is the knowledge that teachers of mathematics need and it differs from the knowledge that research or applied mathematicians must know This text is designed to provide teachers with insights into this mathematical knowledge for teaching Teaching and Learning High School Mathematics is likely different from many other texts that you have used It integrates both content and pedagogy to help you develop and build your own understanding of teaching The text is designed to help you develop deep conceptual understanding of fundamental mathematics Ma 1999 so that you are able to approach mathematics from multiple perspectives with many tools Such flexibility in teaching is essential if teachers are to help all students become mathematically proficient Throughout this book you are encouraged to work in cooperative teams This strategy is designed to help you develop a mathematics learning community and build a professional network that will be a valuable resource during your professional career Hopefully you will experience the benefits of engaging in rich mathematical discussions with peers and consider how to encourage such learning environments in your own classrooms Lesson planning is another element pervasive throughout this text To help teachers plan for effective student centered lessons the Question Response Support QRS Guide is introduced in Lesson 1 1 and used throughout the remainder of the lessons The QRS Guide is a tool on which teachers may record tasks or questions Q for students expected and observed student responses R and teacher support S in the form of additional just enough questions to support students in their progress on the task In each unit teachers expand their repertoire of teaching and learning elements and strategies and incorporate these elements as they plan additional lesson segments In Unit 4 lesson planning is formally introduced as teachers put together elements from previous units into complete cohesive lesson plans *Precalculus: A Functional Approach to Graphing and Problem Solving* Karl Smith, 2013 *Precalculus A Functional Approach to Graphing and Problem Solving* prepares students for the concepts and applications they will encounter in future calculus courses In far too many texts process is stressed over insight and understanding and students move on to calculus ill equipped to think conceptually about its essential ideas This text provides sound development of the important mathematical underpinnings of calculus

stimulating problems and exercises and a well developed engaging pedagogy Students will leave with a clear understanding of what lies ahead in their future calculus courses Instructors will find that Smith's straightforward student friendly presentation provides exactly what they have been looking for in a text *Teaching Mathematics in Secondary and Middle School* James S. Cangelosi, 1992

Eureka Math Algebra II Study Guide Great Minds, 2016-06-29 The team of teachers and mathematicians who created Eureka Math believe that it's not enough for students to know the process for solving a problem they need to know why that process works That's why students who learn math with Eureka can solve real world problems even those they have never encountered before The Study Guides are a companion to the Eureka Math program whether you use it online or in print The guides collect the key components of the curriculum for each grade in a single volume They also unpack the standards in detail so that anyone even non Eureka users can benefit The guides are particularly helpful for teachers or trainers seeking to undertake or lead a meaningful study of the grade level content in a way that highlights the coherence between modules and topics We're here to make sure you succeed with an ever growing library of resources Take advantage of the full set of Study Guides available for each grade PK 12 or materials at eureka-math.org such as free implementation and pacing guides material lists parent resources and more

Basic Calculus of Planetary Orbits and Interplanetary Flight Alexander J. Hahn, 2020-03-14 Intended for a one or two semester course this text applies basic one variable calculus to analyze the motion both of planets in their orbits as well as interplanetary spacecraft in their trajectories The remarkable spacecraft missions to the inner and outermost reaches of our solar system have been one of the greatest success stories of modern human history Much of the underlying mathematical story is presented alongside the astonishing images and extensive data that NASA's Voyager NEAR Shoemaker Cassini and Juno missions have sent back to us First and second year college students in mathematics engineering or science and those seeking an enriching independent study will experience the mathematical language and methods of single variable calculus within their application to relevant conceptual and strategic aspects of the navigation of a spacecraft The reader is expected to have taken one or two semesters of the basic calculus of derivatives integrals and the role that limits play Additional prerequisites include knowledge of coordinate plane geometry basic trigonometry functions and graphs including trig inverse exponential and log functions The discussions begin with the rich history of humanity's efforts to understand the universe from the Greeks to Newton and the Scientific Revolution to Hubble and galaxies to NASA and the space missions The calculus of polar functions that plays a central mathematical role is presented in a self contained way in complete detail Each of the six chapters is followed by an extensive problem set that deals with and also expands on the concerns of the chapter The instructor has the flexibility to engage them with greater or lesser intensity I have been an aerospace engineer for 39 years and honestly it would be hard for me to overstate how valuable I believe this book will be to numerous scientific and engineering disciplines and in particular to the future of aerospace engineering This book is perfectly crafted to motivate educate and prepare the scientists and engineers who wish to reach for the sky and beyond Dr Mario Zoccoli Aerospace Engineer NASA and Lockheed Martin
