Question 1

The function f is defined by $f : x \mapsto 2x + k$, $x \in \mathbb{R}$, where k is a constant.

- (i) In the case where $k = 3$, solve the equation $ff(x) = 25$. [2]

The function g is defined by $g : x \mapsto x^2 - 6x + 8$, $x \in \mathbb{R}$.

- (ii) Find the set of values of k for which the equation $f(x) = g(x)$ has no real solutions. [3]

The function h is defined by $h : x \mapsto x^2 - 6x + 8$, $x > 3$.

- (iii) Find an expression for $h^{-1}(x)$. [4]

Question 2

- (i) Express $2x^2 - 12x + 13$ in the form $a(x + b)^2 + c$, where a , b and c are constants. [3]

- (ii) The function f is defined by $f(x) = 2x^2 - 12x + 13$ for $x \geq k$, where k is a constant. It is given that f is a one-one function. State the smallest possible value of k . [1]

The value of k is now given to be 7.

- (iii) Find the range of f . [1]

- (iv) Find an expression for $f^{-1}(x)$ and state the domain of f^{-1} . [5]

Question 3

The function f is defined by $f : x \mapsto x^2 + 4x$ for $x \geq c$, where c is a constant. It is given that f is a one-one function.

- (i) State the range of f in terms of c and find the smallest possible value of c . [3]

The function g is defined by $g : x \mapsto ax + b$ for $x \geq 0$, where a and b are positive constants. It is given that, when $c = 0$, $gf(1) = 11$ and $fg(1) = 21$.

- (ii) Write down two equations in a and b and solve them to find the values of a and b . [6]

Question 4

A Statistical Mechanical Interpretation of Algorithmic Information Theory Kohtaro Tadaki, 2019-11-11 This book is the first one that provides a solid bridge between algorithmic information theory and statistical mechanics Algorithmic information theory AIT is a theory of program size and recently is also known as algorithmic randomness AIT provides a framework for characterizing the notion of randomness for an individual object and for studying it closely and comprehensively In this book a statistical mechanical interpretation of AIT is introduced while explaining the basic notions and results of AIT to the reader who has an acquaintance with an elementary theory of computation A simplification of the setting of AIT is the noiseless source coding in information theory First in the book a statistical mechanical interpretation of the noiseless source coding scheme is introduced It can be seen that the notions in statistical mechanics such as entropy temperature and thermal equilibrium are translated into the context of noiseless source coding in a natural manner Then the framework of AIT is introduced On this basis the introduction of a statistical mechanical interpretation of AIT is begun Namely the notion of thermodynamic quantities such as free energy energy and entropy is introduced into AIT In the interpretation the temperature is shown to be equal to the partial randomness of the values of all these thermodynamic quantities where the notion of partial randomness is a stronger representation of the compression rate measured by means of program size complexity Additionally it is demonstrated that this situation holds for the temperature itself as a thermodynamic quantity That is for each of all the thermodynamic quantities above the computability of its value at temperature T gives a sufficient condition for T to be a fixed point on partial randomness In this groundbreaking book the current status of the interpretation from both mathematical and physical points of view is reported For example a total statistical mechanical interpretation of AIT that actualizes a perfect correspondence to normal statistical mechanics can be developed by identifying a microcanonical ensemble in the framework of AIT As a result the statistical mechanical meaning of the thermodynamic quantities of AIT is clarified In the book the close relationship of the interpretation to Landauer's principle is pointed out
