Integration of Metabolism, Energetics, and Signal Transduction

Robert K. Ockner,2007-05-08 Complex and unexplained phenomena tend to foster unorthodox perspectives This publication is an example as is a prior publication that emphasized the concept that intermediary metabolism might play a significant and determining role in hepatocyte proliferation and 1 tumorigenesis Formulation of this hypothesis was based on an attempt to clarify several poorly understood phenomena including the observations 1 that xenobiotic peroxisome proliferators such as the fibrate hypolipidemic agents induce hepatocyte proliferation and carcinogenesis in rodents 2 that benign and malignant liver tumors complicate the human syndrome of glycogen storage disease type I glucose 6 phosphatase deficiency and 3 that in this same syndrome administration of glucose exerts an anti tumor effect Fatty acid and glucose metabolism are tightly linked in a we established and profoundly important interplay This connection together with the fact that peroxisome proliferator induced hepatocyte proliferation and carcinogenesis reflects inhibition of mitochondrial carnitine palmitoyltransferase I and fatty acid oxidation suggested the possibility that regulation of fatty acid metabolism could prove to be a pivotal determinant in the control of cell growth In 1993 the year in which the paper cited above was published insight into the importance of growth factors and signal transduction pathways in cell cycle regulation was increasing rapidly but metabolic and energetic aspects of cell proliferation had attracted relatively little attention Despite this the concept seemed inescapable that the two seemingly distinct and unrelated determinants signal transduction and metabolism were integrally linked

Solomon, C.F. Walter, 2013-03-13 When I was asked to help organize an American Association for the Advancement of Science symposium about how mathematical models have contributed to biology I agreed immediately The subject is of immense importance and wide spread interest However too often it is discussed in biologically sterile environments by mutual admiration society groups of theoreticians many of whom have never seen and most of whom have never done an original scientific experiment with the biological materials they attempt to describe in abstract and often prejudiced terms The opportunity to address the topic during an annual meeting of the AAAS was irresistible In order to try to maintain the integrity of the original intent of the symposium it was entitled Contributions of Mathematical Models to Biological Discovery This symposium was organized by Daniel Solomon and myself held during the 141st annual meeting of the AAAS in New York during January 1975 sponsored by sections G and N Biological and Medical Sciences of the AAAS and the North American Regions of the Biometric Society and supported by grant BMS 75 0280 from the National Science Foundation What follows in this volume are papers by nine of the participants who not only felt that they had something to say in a symposium entitled Contributions of Mathematical Models to Biological Discovery but who also were willing to record their ideas in more detail here *Radiation Oncology* Murat Beyzadeoglu, Gokhan Ozyigit, Ugur Selek, 2025-02-20 This updated work is an all in one
