A Complete Introduction to Modern NMR Spectroscopy Roger S. Macomber, 1997-12-23 Clear accessible coverage of modern NMR spectroscopy for students and professionals in many fields of science Nuclear magnetic resonance NMR spectroscopy has made quantum leaps in the last decade becoming a staple tool in such divergent fields as chemistry physics materials science biology and medicine That is why it is essential that scientists working in these areas be fully conversant with current NMR theory and practice This down to basics text offers a comprehensive up to date treatment of the fundamentals of NMR spectroscopy Using a straightforward approach that develops all concepts from a rudimentary level without using heavy mathematics it gives readers the knowledge they need to solve any molecular structure problem from a complete set of NMR data Topics are illustrated throughout with hundreds of figures and actual spectra Chapter end summaries and review problems with answers are included to help reinforce and test understanding of key material From NMR studies of biologically important molecules to magnetic resonance imaging this book serves as an excellent all around primer on NMR spectroscopic analysis

GENERAL BIOLOGY I Dennis Holley, 2017-05-31 GENERAL BIOLOGY Investigating Life is an introductory level college biology textbook that provides students with an accessible and engaging look at the fundamentals of biology. Written for a two-term undergraduate course of mixed majors and non-majors, this reader-friendly text is concept-driven vs. terminology-driven. That is, the text is based on the underlying concepts and principles of biology rather than strict memorization of terminology. Written in a student-centered conversational style, this educational research-based textbook uniquely connects students and our society to living things from various perspectives: economic, ecologic, medical, and cultural, exploring how the biological world and human realm are intimately intertwined. End-of-chapter questions challenge students to think critically and creatively while incorporating science process skills and biological principles. **Biology Coloring Workbook I.** Edward Alcamo, 1998. Following in the successful footsteps of the Anatomy and the Physiology Coloring Workbook, The Princeton Review introduces two new coloring workbooks to the line. Each book features 125 plates of computer-generated state-of-the-art precise original artwork, perfect for students enrolled in allied health and nursing courses, psychology, and neuroscience and elementary biology and anthropology courses. *Advanced Biology* Michael Roberts, Michael Reiss, Grace Monger, 2000. The major new course text has been written by experienced authors to provide coverage of the Advanced Subsidiary AS and Advanced GCE Biology and Human Biology specifications in a single book. *Advanced Biology* provides clear, well-illustrated information which will help develop a full understanding of biological structure and function and of relevant applications. The topics have been carefully organised into parts which give a logical sequence to the book. This new text has been developed to replace the best-selling titles *Biology Principles and Processes* and *Biology A Functional Approach*. Features include full colour design with clear diagrams and photographs, up-to-date information on biotechnology, health, applied genetics, and ecology; clearly written text using the latest Institute of Biology terminology; a useful summary and a bank of practice questions at the end of every chapter; support boxes help bridge the gap from GCSE or equivalent courses; extension boxes providing additional depth of content, some by guest authors who are experts in their field; and a comprehensive index so you can quickly locate information with ease. There is also a website providing additional support that you can access directly at www.advancedbiology.co.uk. On Human Conflict Lou Marinoff, 2019-02-13. *On Human Conflict* excavates the cavernous philosophical foundations of war and peace. The magnum opus is bracketed by the author's experience of the Cuban missile crisis as a schoolboy and his witnessing of 9/11 as an adult. It studies the human species with an admixture of evolutionary insight, free-ranging horror, and heavily guarded optimism. It is also the uncensored voice of a conservative philosopher who dares to speak his mind on contemporary conflicts, including the culture and gender wars and Islamic jihad, in an age when political correctness has lowered an Ivy Curtain prohibiting freedom of expression on campus and across Western civilization entire.
