Voice Communication Between Humans and Machines takes the first interdisciplinary look at what we know about voice processing where our technologies stand and what the future may hold for this fascinating field. The volume integrates theoretical, technical, and practical views from world-class experts at leading research centers around the world, reporting on the scientific bases behind human-machine voice communication, the state of the art in computerization, and progress in user-friendliness. It offers an up-to-date treatment of technological progress in key areas: speech synthesis, speech recognition, and natural language understanding. The book also explores the emergence of the voice processing industry and specific opportunities in telecommunications and other businesses in military and government operations and in assistance for the disabled. It outlines as well practical issues and research questions that must be resolved if machines are to become fellow problem solvers along with humans. **Voice Communication Between Humans and Machines** provides a comprehensive understanding of the field of voice processing for engineers, researchers, and business executives, as well as speech and hearing specialists, advocates for people with disabilities, faculty, and students and interested individuals.
